

Healthy Food
Environment Policy
Index (Food-EPI):
Yukon Territory

April 21, 2017

Overview

This document was created for the **Healthy Food Environment Policy Index** (Food-EPI) Canada 2016 project, as a part of the Canadian arm of the International Network for Food and Obesity/non-communicable diseases Research, Monitoring and Action Support (known as **INFORMAS**). The INFORMAS network was founded by a group of international experts from 9 universities and 4 global NGOs in the area of food and nutrition, including Dr. L'Abbé, and this network has since expanded to include dozens of researchers from 19 countries across the globe. The objective of INFORMAS is to 'monitor and benchmark food environments and policies globally to reduce obesity, diet-related non-communicable diseases and their related inequalities', and the work aligns with overarching efforts of the United Nations and the World Health Organization to prioritize monitoring on NCDs and associated risk factors to improve population health¹.

The **Food-EPI Canada** project aims to assess provincial and federal government progress in implementing globally recommended policies relating to the food environment. Using a standardized, common Food-EPI process², the information on food policies that is compiled in this document will be used by experts in the areas of food and nutrition from across Canada to rate the extent of implementation by Canadian governments (provincial, territorial and federal) compared to international examples of 'good practices' established for each indicator. As time progresses, these international examples will continue to expand, as more governments implement innovative policies to support a healthy food environment.

This document summarizes policy actions that the Government of Yukon has taken relating to the food environment up until January 1, 2017. It does not include announcements that have not yet been implemented.

Any questions regarding this document can be directed to Dr. Lana Vanderlee (lana.vanderlee@utoronto.ca).

Acknowledgements

The Food-EPI Canada study is led by Dr. Lana Vanderlee and Dr. Mary L'Abbé in the WHO Collaborating Centre of Nutrition and Chronic Disease Prevention at the Department of Nutritional Sciences, University of Toronto, with research support from Sahar Goorang, Kimiya Karbasy, and Alyssa Schermel. This research was funded by a grant from the Canadian Institutes of Health Research (CIHR) (#343709) and a CIHR Banting Postdoctoral Fellowship to Dr. Vanderlee. We would like to gratefully acknowledge the support of the INFORMAS research group, including Dr. Stefanie Vandevijvere, Prof. Boyd Swinburn and Dr. Gary Sacks.

We would like to extend our sincerest gratitude to the government representatives who have verified the information in this document. Our particular thanks to Kim Hickman for her support with coordinating government input for this document.

As far as possible, when policy details are noted in the document, we have provided references to publicly-available sources or noted as a 'written communication' from relevant policy makers. While every effort has been taken to ensure the accuracy of the information in this document, any errors/omissions are the responsibility of the research team.

POLICY DOMAINS

Policy area: Food Composition

Food-EPI vision statement: There are government systems implemented to ensure that, where practicable, processed foods and out-of-home meals minimise the energy density and the nutrients of concern (salt, saturated fat, trans fat, added sugar)

COMP2 Food composition targets/standards/restrictions for out-of-home meals

Food-EPI good practice statement

The government has established food composition targets/standards for out-of-home meals in food service outlets for the content of the nutrients of concern in certain foods or food groups if they are major contributors to population intakes of these nutrients of concern (trans fats, added sugars, salt, saturated fat)

Definitions and scope

- Out-of-home meals include foods sold at quick service restaurants, dine-in restaurants and take-away outlets, coffee, bakery and snack food outlets (both fixed outlets and mobile food vendors). It may also include supermarkets where ready-to-eat foods are sold.
- Includes legislated bans on nutrients of concern
- Includes mandatory or voluntary targets, standards (i.e. reduce by X%, maximum mg/g per 100g or per serving)
- Excludes legislated restrictions related to other ingredients (e.g. additives)
- Excludes mandatory out-of-home meal composition regulations related to other nutrients, e.g. folic acid or iodine fortification
- Excludes general guidelines advising food service outlets to reduce nutrients of concern
- Excludes the provision of resources or expertise to support food service outlets with reformulation (see 'RETAIL4')

International examples

- **New York City, USA:** In 2006, New York City's Health Code was amended to restrict the amount of *trans*-fats allowed in food served by all food service establishments required to hold a license from the New York City Health Department, including restaurants, bakeries, cafeterias, caterers, mobile food vendors, and concession stands. The maximum amount of *trans*-fat allowed per serving is 0.5g. Violators are subject to fines of \$200.00 to \$2,000.00. A range of other US cities have since followed suit and banned restaurants from serving *trans*-fats³.
- **New York City, USA:** In 2009, New York City established voluntary salt guidelines for various restaurant and store-bought foods. In 2010, this city initiative evolved into the National Salt Reduction Initiative that encouraged nationwide partnerships among food manufacturers and restaurants involving more than 100 city and state health authorities to reduce excess sodium by 25% in packaged and restaurant foods. The goal is to reduce Americans' salt intake by 20% over five years. The National Salt Reduction Initiative has worked with the food industry to establish salt reduction targets for 62 packaged foods and 25 restaurant food categories for 2012 and 2014. The commitments and achievements of companies have been published online⁴.

- **New Zealand:** In New Zealand, The Chip group, funded 50% by the Ministry of Health and 50% by industry, aims to improve the nutritional quality of deep-fried chips served by food service outlets by setting an industry standard for deep frying oils. The standard for deep frying oil is maximum 28% saturated fat, 3% linoleic acid and 1% of *trans*-fat. The Chip group oil logo for use on approved oil packaging was developed in 2010⁵.
- **The Netherlands:** On January 2014, the Dutch Ministry of Health, Welfare and Sport signed an agreement with trade organizations representing food manufacturers, supermarkets, hotels, restaurants, caterers and the hospitality industry to lower the levels of salt, saturated fat and calories in food products. The agreement includes ambitions for the period up to 2020 and aims to increase the healthiness of the food supply^{6,7}.

Context

While regulations for packaged food are primarily based at the federal level, composition targets or standards for restaurant foods can potentially fit within the mandate of provincial or territorial governments.

Policy details

There are no policies relating to food composition for out-of-home meals in Yukon.

**Comments/
notes**

Policy area: Food Labelling

Food-EPI vision statement: There is a regulatory system implemented by the government for consumer-oriented labelling on food packaging and menu boards in restaurants to enable consumers to easily make informed food choices and to prevent misleading claims

LABEL4 Menu labelling

Food-EPI good practice statement

A consistent, single, simple, clearly-visible system of labelling the menu boards of all quick service restaurants (e.g., fast food chains) is applied by the government, which allows consumers to interpret the nutrient quality and energy content of foods and meals on sale

Definitions and scope

- Quick service restaurants: In the Canadian context this definition includes fast food chains as well as coffee, bakery and snack food chains. It may also include supermarkets where ready-to-eat foods are sold.
- Labelling systems: Includes any point-of-sale (POS) nutrition information such as total calories; percent daily intake; traffic light labelling; star rating, or specific amounts of nutrients of concern
- Menu board includes menu information at various points of purchase, including in-store, drive-through and online purchasing
- Includes endorsement schemes (e.g., accredited healthy choice symbol) on approved menu items

International examples

- **South Korea:** Since 2010, the Special Act on Safety Control of Children's Dietary Life has required all chain restaurants with 100 or more establishments to display nutrient information on menus including energy, total sugars, protein, saturated fat and sodium⁸.
- **Taiwan:** Since July 2015, convenience store chains, drink vendor chains and fast food chains have to label the sugar and caffeine content of prepared-when-ordered drinks (e.g. coffee-and-tea-based drinks, fruit and vegetable juices) according to a regulation based on the Food Safety and Sanitation Act. The amount of sugar added to drinks (specified in sugar cubes) and its calorie content have to be displayed on drink menus and/or notice boards in a prescribed minimum font. In addition, different colours have to be used to signal the level of caffeine contained in coffee drinks⁸.
- **USA:** Section 4205 of the Patient Protection and Affordable Care Act (2010)⁹ requires that all chain restaurants with 20 or more establishments display energy information on menus. The implementing regulations were published by the Food and Drug Administration on 1 December 2014. Implementation has been delayed several times and is now set for 5 May 2017. Two states (California and Vermont), seven counties (e.g. King County, WA and Albany County NY) and two municipalities (e.g. New York City, Philadelphia) have already implemented regulations requiring chain restaurants (often chains with more than a given number of outlets) to display calorie information on menus and display boards. These regulations will be pre-empted by the national law once implemented; local governments will still be able to enact menu labelling regulations for establishments not covered by national law. The regulations also require vending machine operators of more than 20 vending machines to post calories for foods where the on-pack label is not visible to consumers by 26 July 2018⁸.

- **Australia:** Legislation in Australian Capital Territory (Food Regulation 2002) and the States of New South Wales (Food Regulation 2010) and South Australia (Food Regulation 2002) requires restaurant chains (e.g. fast food chains, ice cream bars) with ≥ 20 outlets in the state (or seven in the case of ACT), or 50 or more across Australia, to display the kilojoule content of food products on their menu boards. Average adult daily energy intake of 8700kJ must also be prominently featured. Other chains/food outlets are allowed to provide this information on a voluntary basis, but must follow the provisions of the legislation⁸.
- **New York City, USA:** Following an amendment to Article 81 of the New York City Health Code (addition of section 81.49), chain restaurants are required to put a warning label on menus and menu boards, in the form of a salt-shaker symbol (salt shaker inside a triangle), when dishes contain 2,300 mg of sodium or more. It applies to food service establishments with 15 or more locations nationwide. In addition, a warning statement is required to be posted conspicuously at the point of purchase: "Warning: [salt shaker symbol] indicates that the sodium (salt) content of this item is higher than the total daily recommended limit (2300 mg). High sodium intake can increase blood pressure and risk of heart disease and stroke." This came into effect 1 December 2015^{8,10}.

Context

There is currently no federal policy on menu labelling in Canada. There is a Federal/Provincial/Territorial Task Group on the Provisions of Nutrition Information in Restaurants and Foodservices; however, this group is not currently active and has not released any guidelines or recommendations regarding menu labelling.

Policy details

There are no territorial menu labelling policies in Yukon.

Comments/ notes

Policy area: Food Promotion

Food-EPI vision statement: There is a comprehensive policy implemented by the government to reduce the impact (exposure and power) of promotion of unhealthy foods to children (<16 years) across all media

PROMO1 Restrict promotion of unhealthy food: broadcast media

Food-EPI good practice statement

Effective policies are implemented by the government to restrict exposure and power of promotion of unhealthy foods to children through broadcast media (TV, radio)

Definitions and scope

- Includes mandatory policy (i.e. legislation or regulations) or voluntary standards, codes, guidelines set by government or by industry where the government plays a role in development, monitoring, enforcement or resolving complaints
- Includes free-to-air and subscription television and radio only (see PROMO2 for other forms of media)

International examples

- **Norway / Sweden:** Under the Broadcasting Act, advertisements (food and non-food) may not be broadcast on television directed to children or in connection with children's programs. This applies to children 12 years and younger¹¹.
- **Quebec, Canada:** In Quebec, most citizens speak French and it is the only province in Canada, where children below 13 years old are protected under the Consumer Protection Act since 1980¹². In Québec, the Consumer Protection Act prohibits commercial advertising (including food and non-food) directed at children less than 13 years of age through television, radio and other media. To determine whether or not an advertisement is directed at persons under thirteen years of age, account must be taken of the context of its presentation, and in particular of: a) the nature and intended purpose of the goods advertised; b) the manner of presenting such advertisement; and c) the time and place it is shown. A cut-off of 15% share of children audience is used to protect children from TV advertising¹³. Any stakeholder involved in a commercial process (from the request to create an advertisement to its distribution, including its design) may be accused of not complying with the legislation in force. Per indictment, that person is liable to: a fine ranging from \$600 to \$15,000 (in the case of a natural person); a fine ranging from \$2,000 to \$100,000 (in the case of a legal person). Notably, for the rest of Canada, child-directed food marketing is self-regulated using the Canadian Children's Food and Beverage Advertising Initiative (CAI) by Advertising Standards Canada (ASC) through The Broadcast Code for Advertising to Children.
- **Chile:** In 2012, the Chilean government approved a Law of Nutritional Composition of Food and Advertising (Ley 20, 606)¹⁴. In June 2015, the Chilean authority approved the regulatory norms required for the law's implementation (Diario Oficial No 41.193). The regulatory norms define limits for calories, saturated fat, sugar and sodium content considered "high" in foods and beverages. The regulatory norms define limits for calories (275 calories/100g or 70 calories/100mL), saturated fat (4g/100g or 3g/100mL), sugar (10g/100g or 5g/100mL) and sodium (400mg/100g or 100mg/100mL) content considered "high" in foods and beverages. The law restricts advertising directed to children under the age of 14 years of foods in the "high in" category. The regulatory norms define advertising targeted to children as programmes directed to children or with an audience of greater than 20% children, and according to the design of the advertisement. Promotional strategies and incentives, such as cartoons, animations, and toys that could attract the attention of children are included in the ban. The regulation took effect 1 July 2016³. Chile outlaws Kinder Surprise eggs and prohibit toys in McDonald's 'Happy Meals' as part of this law¹⁵.

- **Ireland:** Advertising, sponsorship, teleshopping and product placement of foods high in fats, sugars and salt, as defined by a nutrient profiling model, are prohibited during children's TV and radio programmes where over 50% of the audience are under 18 years old (Children's Commercial Communications Code, 2013 revision). In addition, there is an overall limit on advertising of foods high in fats, sugars and salt adverts at any time of day to no more than 25% of sold advertising time and to only one in four advertisements. Remaining advertising targeted at children under the age of 13 must not include nutrient or health claims or include licensed characters³.
- **South Korea:** TV advertising to children less than 18 years of age is prohibited for specific categories of food before, during and after programmes shown between 5-7pm and during other children's programmes (Article 10 of the Special Act on the Safety Management of Children's Dietary Life, as amended 2010)^{3,16}.

Context

Restriction of advertising to children falls within the provincial/territorial or federal jurisdiction. It is acknowledged that forms of advertising that cross state borders (i.e. television programming or internet advertising) would be strengthened by consistent legislation across jurisdictions.

Federal context

There is currently no federal policy regarding marketing of unhealthy foods to children. The **Canadian Radio-television and Telecommunications Commission (CRTC)** enforces the *Broadcasting Act*¹⁷, the *Broadcast Code for Advertising to Children (Children's Code)*¹⁸ *Canadian Code of Advertising Standards*¹⁸ which includes general provisions for marketing to children

The voluntary **Food and Beverage Children's Advertising Initiative (CAI)** was created in 2007, in which participating companies pledge to advertise only products classified as "better for you" in various media, and uses Uniform Nutrition Criteria¹⁹ which require products considered 'better for you' to limit negative nutrients such as fat, sodium and sugar, and increase positive nutrients such as vitamins, minerals and fibre. Both the CAI and the Children's Code are published and administered by Advertising Standards Canada (ASC)²⁰, an "industry body committed to creating maintaining confidence in advertising". Compliance with this code of is monitored by ASC, based on a consumer complaint process.

Policy details

There are no territorial policies relating to marketing to children via broadcast media.

Comments/ notes

PROMO2 Restrict promotion of unhealthy food: non-broadcast media

Food-EPI good practice statement

Effective policies are implemented by the government to restrict exposure and power of promotion of unhealthy foods to children through non-broadcast media (e.g. Internet, social media, food packaging, sponsorship, outdoor and public transport advertising)

Definitions and scope

- Non-broadcast media promotion includes: print (e.g. children's magazines), online (e.g. social media, branded education websites, online games, competitions and apps) outdoors and on/around public transport (e.g. signage, posters and billboards), cinema advertising, product placement and brand integration (e.g. in television shows and movies), direct marketing (e.g. fundraising in schools, provision of show bags, samples or flyers), product design and packaging (e.g. use of celebrities or cartoons, competitions and give-aways) or POS displays
- Where the promotion is specifically in a children's setting, this should be captured in 'PROMO3'

International examples

- **Chile:** In 2012, the Chilean government approved a Law of Nutritional Composition of Food and Advertising (Ley 20, 606)¹⁴. In June 2015, the Chilean authority approved the regulatory norms required for the law's implementation (Diario Oficial No 41.193). The regulatory norms define limits for calories, saturated fat, sugar and sodium content considered "high" in foods and beverages. The regulatory norms define limits for calories (275 calories/100g or 70 calories/100mL), saturated fat (4g/100g or 3g/100mL), sugar (10g/100g or 5g/100mL) and sodium (400mg/100g or 100mg/100mL) content considered "high" in foods and beverages. The law restricts advertising directed to children under the age of 14 years of foods in the "high in" category. The regulatory norms define advertising targeted to children as websites directed to children or with an audience of greater than 20% children, and according to the design of the advertisement. Promotional strategies and incentives, such as cartoons, animations, and toys that could attract the attention of children are included in the ban. The regulation took effect 1 July 2016 and applies to all advertising media³. Chile outlaws Kinder Surprise eggs and prohibit toys in McDonald's 'Happy Meals' as part of this law¹⁵.
- **Quebec, Canada:** In Quebec, most citizens speak French and it is the only province in Canada, where children below 13 years old are protected under the Consumer Protection Act since 1980¹². In Québec, the Consumer Protection Act prohibits commercial advertising directed at children less than 13 years of age through all media. To determine whether or not an advertisement is directed at persons under thirteen years of age, account must be taken of the context of its presentation, and in particular of: a) the nature and intended purpose of the goods advertised; b) the manner of presenting such advertisement; and c) the time and place it is shown¹³. Any stakeholder involved in a commercial process (from the request to create an advertisement to its distribution, including its design) may be accused of not complying with the legislation in force. Per indictment, that person is liable to: a fine ranging from \$600 to \$15,000 (in the case of a natural person); a fine ranging from \$2,000 to \$100,000 (in the case of a legal person). Notably, for the rest of Canada, child-directed food marketing is self-regulated using the Canadian Children's Food and Beverage Advertising Initiative (CAI) by Advertising Standards Canada (ASC) through The Broadcast Code for Advertising to Children.

Context

See PROMO1. The Canadian Code of Advertising Standards applies to all forms of advertising, including **internet, social media, sponsorship, outdoor advertising, etc., but does not apply to packaging, wrappers and labels or point of sale displays within retail establishments**¹⁸. The voluntary CAI does restrict promotion of unhealthy foods via Internet advertising, including company-owned websites, video and computer games, DVDs of movies, and mobile media among participants unless voluntarily included in commitments by the company. The CAI commitments do not include product packaging.

Policy details

There are no territorial policies relating to marketing to children via non-broadcast media.

**Comments/
notes**

PROMO3 Restrict promotion of unhealthy foods: children's settings

Food-EPI good practice statement

Effective policies are implemented by the government to ensure that unhealthy foods are not commercially promoted to children in settings where children gather (e.g. preschools, schools, sport and cultural events)

Definitions and scope

- Children's settings include: areas in and around schools, preschools/ kindergartens, day-care centres, children's health services (including primary care, maternal and child health or tertiary settings), sport, recreation and play areas/ venues/ facilities and cultural/community events where children are commonly present
- Includes restrictions on marketing in government-owned or managed facilities/venues (including within the service contracts where management is outsourced)
- Includes restriction on unhealthy food sponsorship in sport (e.g. junior sport, sporting events, venues)

International examples

- **Chile:** In 2012, the Chilean government approved a Law of Nutritional Composition of Food and Advertising (Ley 20, 606)¹⁴. In June 2015, the Chilean authority approved the regulatory norms required for the law's implementation (Diario Oficial No 41.193). The regulatory norms define limits for calories, saturated fat, sugar and sodium content considered "high" in foods and beverages. The regulatory norms define limits for calories (275 calories/100g or 70 calories/100mL), saturated fat (4g/100g or 3g/100mL), sugar (10g/100g or 5g/100mL) and sodium (400mg/100g or 100mg/100mL) content considered "high" in foods and beverages. The law restricts advertising directed to children under the age of 14 of foods in the "high in" category on school grounds, including preschools, primary and secondary schools. Promotional strategies and incentives, such as cartoons, animations, and toys that could attract the attention of children are included in the ban. The regulation took effect 1 July 2016³.
- **Spain:** In 2011, the Spanish Parliament approved a Law on Nutrition and Food Safety (Ley 17/2011), which stated that kindergartens and schools should be free from all advertising. Criteria for the authorisation of food promotion campaigns, nutritional education and promotion of sports or physical activity campaigns were developed jointly by the Spanish Agency for Consumer Affairs, Food Safety and Nutrition (AECOSAN) and the Regional Health Authorities and was implemented in July 2015. AECOSAN and the Spanish Regional Education and Health Administrations monitor the enforcement of the law³.
- **Uruguay:** In September 2013, the government of Uruguay adopted Law No 19.140 "Alimentación saludable en los centros de enseñanza" (Healthy foods in schools)²¹. The law prohibits the advertising and marketing of foods and drinks that do not meet the nutrition standards [referenced in Article 3 of the law, and outlined in school nutrition recommendations published by the Ministry of Health in 2014]. Advertising in all forms is prohibited, including posters, billboards, and use of logos/brands on school supplies, sponsorship, and distribution of prizes, free samples on school premises and the display and visibility of food. The implementation of the law started in 2015³.
- **Hungary:** Based on Section 8 of Act XLVIII on Basic Requirements and Certain Restrictions of Commercial Advertising Activities (2008), Hungary prohibits all advertising directed at children under 18 in child welfare and child protection institutes, kindergartens, elementary schools and their dormitories. Health promotion and prevention activities in schools may only involve external organizations and consultants who are recommended by the National Institute for Health Development according to Section 128(7) of the Ministerial Decree 20/2012 (VIII.31.) on the Operation of Public Education Institutions and the Use of Names of Public Education Institutions¹¹.

Context

See PROMO1 and PROMO2. The restriction of advertising in children's settings could fall within the jurisdiction of provincial/territorial governments.

Policy details

There are no territorial policies relating to marketing to children in settings where children gather.

Policy area: Food Prices

Food-EPI vision statement: Food pricing policies (e.g., taxes and subsidies) are aligned with health outcomes by helping to make the healthy eating choices the easier, cheaper choices

PRICES1 Reduce taxes on healthy foods

Food-EPI good practice statement

Taxes or levies on healthy foods are minimised to encourage healthy food choices where possible (e.g. low or no sales tax, excise, value-added or import duties on fruit and vegetables)

Definitions and scope

- Includes exemptions from excise tax, ad valorem tax or import duty
- Includes differential application of excise tax, ad valorem tax or import duty
- Excludes subsidies (see 'PRICES3') or food purchasing welfare support (see 'PRICES4')

International examples

- **Australia:** Goods and services tax (GST) exemption exists for basic foods (including fresh fruits and vegetables)²².
- **Tonga:** In 2013, as part of a broader package of fiscal measures, import duties were lowered from 20% to 5% for imported fresh, tinned or frozen fish in order to increase affordability and promote healthier diets²³.
- **Poland:** In Poland, the basic rate of tax on goods and services is 22%, while the rate is lower (7%) for goods related to farming and forestry and even lower (3%) for unprocessed and minimally processed food products²⁴.
- **Fiji:** To promote fruit and vegetable consumption, Fiji has removed the excise duty on imported fruits, vegetables and legumes. Import tax was decreased for most varieties from the original 32% to 5% (exceptions: 32% remains on tomatoes, cucumbers, potatoes, squash, pumpkin and 15% remains on coconuts, pineapples, guavas, mangosteens) and removed completely for garlic and onions²³.

Context

National Context

Taxes on products in Canada are governed by the **Excise Tax Act** and its regulations, which are also typically applied to food products.

Provincial Context

In Canada, a GST applies to most supplies of goods and services, at a rate of 5%. There is a Harmonized Sales Tax (HST), which harmonizes provincial sales tax with GST in several participating provinces at the following rates: 13% in Ontario, and 15% in New Brunswick, Newfoundland and Labrador, Nova Scotia and Prince Edward Island. Also effective April 1, 2013, the 12% HST in British Columbia was replaced by the GST and a provincial sales tax.

Briefly, for food products, the application of GST and HST is considered based on whether or not foods are considered 'basic groceries'. Currently, Canada's GST and HST legislation exempts some 'healthy' foods. The list of foods exempt from GST/HST include fresh, frozen, canned and vacuum sealed fruits and vegetables, breakfast cereals, most milk products, fresh meat, poultry and fish, eggs and coffee beans.

**Policy
details**

Yukon Territory does not charge any additional tax beyond GST.

**Comments/
notes**

PRICES2 Increase taxes on unhealthy foods

Food-EPI good practice statement

Taxes or levies on unhealthy foods (e.g. sugar-sweetened beverages, foods high in nutrients of concern) are in place and increase the retail prices of these foods by at least 10% to discourage unhealthy food choices where possible, and these taxes are reinvested to improve population health

Definitions and scope

- Includes differential application of excise tax, ad valorem tax or import duty on high calorie foods or foods that are high in nutrients of concern

International examples

- **Mexico:** In December 2013, the Mexican legislature passed two new taxes as part of the national strategy for the prevention of overweight, obesity and diabetes. An excise duty of 1 peso (\$0.80) per litre applies to sugary drinks. Sugary drinks are defined under the new law as all drinks with added sugar, excluding milks or yoghurts. This is expected to increase the price of sugary drinks by around 10%. An ad valorem excise duty of 8% applies to foods with high caloric density, defined as equal to or more than 275 calories per 100 grams. The food product categories that are affected by the tax include chips and snacks; confectionary; chocolate and cacao based products; puddings; peanut and hazelnut butters. The taxes entered into force on 1 January 2014. The aim is for the revenue of taxes to be reinvested in population health, namely providing safe drinking water in schools, but there is no evidence (yet) that this is the case as the taxes are not earmarked^{23, 25}.
- **Hungary:** A "public health tax" adopted in 2012 is applied on the salt, sugar and caffeine content of various categories of ready-to-eat foods, including soft drinks (both sugar- and artificially-sweetened), energy drinks and pre-packaged sugar-sweetened products. The tax is applied at varying rates. Soft drinks, for example, are taxed at \$0.24 per litre and other sweetened products at \$0.47 per litre. The tax also applies to products high in salt, including salty snacks with >1g salt per 100g, condiments with >5g salt per 100g and flavourings >15g salt per 100g^{23, 26}.
- **French Polynesia:** Various food and beverage taxes have been in place since 2002 to discourage consumption and raise revenue e.g. domestic excise duty on sweetened drinks and beer; import tax on sweetened drinks, beer and confectionery; tax on ice cream. Between 2002 and 2006, tax revenue went to a preventive health fund; from 2006, 80% has been allocated to the general budget and earmarked for health. The tax is 40 CFP (around \$0.44) per litre on domestically-produced sweet drinks, and 60 CFP (around \$0.68) per litre on imported sweet drinks²³.
- **St. Helena:** In effect since 27 May 2014, a £0.75 per litre excise duty (about \$1.14) is applied to high-sugar carbonated drinks in St. Helena (Customs and Excise Ordinance Chapter 145, Section 5). High sugar carbonated drinks are defined as drinks containing ≥15 grams of sugar per litre²³.
- **UK:** The Government announced a sugar tax on the soft drinks industry as part of the 2016 Budget²⁷. Soft drinks manufacturers will be taxed according to the volume of the sugar-sweetened drinks they produce or import. Drinks will fall into two bands: one for total sugar content above 5g per 100mL (to be taxed at 18 pence per L), and a second, higher band for the most sugary drinks with more than 8g per 100mL (to be taxed at 24 pence per L). The tax will come into force in 2017 in order to give companies time to change the ingredients of their products. The measure will raise an estimated £520 million a year, and will be spent on doubling funding for sport in primary schools. Secondary schools will meanwhile be encouraged to offer more sport as part of longer school days. Pure fruit juices and milk-based drinks will be excluded, as well as small producers.

Context

Both federal and provincial/territorial governments have the legislative power to impose taxes on foods or nutrients of concern.

Policy details

There are no taxes on unhealthy foods in Yukon.

**Comments/
notes**

PRICES3 Existing food subsidies favour healthy foods

Food-EPI good practice statement

The intent of existing subsidies on foods, including infrastructure funding support (e.g. research and development, supporting markets or transport systems), is to favour healthy rather than unhealthy foods in line with overall population nutrition goals

Definitions and scope

- Includes agricultural input subsidies, such as free or subsidised costs for water, fertiliser, seeds, electricity or transport (e.g., freight) where those subsidies specifically target healthy foods
- Includes programs that ensure that farmers receive a certain price for their produce to encourage increased food production or business viability
- Includes grants or funding support for food producers (i.e. farmers, food manufacturers) to encourage innovation via research and development where that funding scheme specifically targets healthy food
- Includes funding support for wholesale market systems that support the supply of healthy foods
- Includes population level food subsidies at the consumer end (e.g. subsidising staples such as rice or bread)
- Excludes incentives for the establishment of, or ongoing support for, retail outlets (including greengrocers, farmers markets, food co-ops, etc. See 'RETAIL2').
- Excludes subsidised training, courses or other forms of education for food producers
- Excludes the redistribution of excess or second grade produce
- Excludes food subsidies related to welfare support (see 'PRICES4')
- Population nutrition goals related to the prevention of obesity and diet-related non communicable diseases (NCDs) (e.g., reducing intake of nutrients of concern, not related to micronutrient deficiencies)

International examples

- **Singapore:** The government, through the Health Promotion Board (HPB) increases the availability and use of healthier ingredients through the "Healthier Ingredient Scheme" (formerly part of the "Healthier Hawker" programme, launched in 2011), which provides in the first instance transitional support to oil manufacturers and importers to help them increase the sale of healthier oils to the food service industry²⁸. The Healthier Ingredient Subsidy Scheme offers a subsidy to suppliers stocking healthier items. Cooking oil is the first ingredient under the scheme, which subsidises oils with a saturated fat level of 35 per cent or lower.

Context

Federal Context

The federal Nutrition North Canada (NNC) program was established in 2011 to provide increased food access to isolated Northern communities in Canada. Registered retailers in the North, country food processors/distributors located in eligible communities, and food suppliers in the South who supply small retailers, institutions and individuals in these eligible isolated communities, can apply for a subsidy based on the weight of eligible foods shipped by air to eligible northern communities. These subsidies are to be passed on to northern consumers by appropriate reductions in the selling prices of eligible foods. There is one NNC-eligible community in Yukon.

Policy details

There are no subsidies relating to healthy foods in Yukon.

Comments/notes

PRICES4 Food-related income support is for healthy foods

Food-EPI good practice statement

The government ensures that food-related income support programs are for healthy foods

Definitions and scope

- Includes programs such as 'food stamps' or other schemes where individuals can utilise government-administered subsidies, vouchers, tokens or discounts in retail settings for specific food purchasing.
- Excludes general programs that seek to address food insecurity such as government support for, or partnerships with, organisations that provide free or subsidised meals (including school breakfast programs) or food parcels or redistribute second grade produce for this purpose.
- Excludes food subsidies at the consumer end (e.g. subsidising staples at a population level – see 'PRICES3')

International examples

- **UK:** The British Healthy Start programme provides pregnant women and/or families with children under the age of four with weekly vouchers to spend on foods including milk, plain yoghurt, and fresh and frozen fruit and vegetables. Participants or their family must be receiving income support/jobseekers allowance or child tax credits. Pregnant women under the age of 18 can also apply. Full national implementation of the programme began in 2006²³.
- **USA:** In 2012, the USDA piloted a "Healthy Incentives Pilot" as part of the Supplemental Nutrition Assistance Program (SNAP, formerly "food stamps"). Participants received an incentive of 30 cents per US\$ spent on targeted fruit and vegetables (transferred back onto their SNAP card). The Pilot included 7500 individuals²³. In New York City and Philadelphia, "Health Bucks" are distributed to farmers markets. When customers use income support (e.g. Food Stamps) to purchase food at farmers markets, they receive one Health Buck worth 2USD for each 5USD spent, which can then be used to purchase fresh fruit and vegetable products at a farmers market²³. In Philadelphia, the programme has been expanded to other retail settings like supermarkets and corner stores.
- **USA:** In 2009, the U.S. Department of Agriculture's implemented revisions to the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) to improve the composition and quantities of WIC-provided foods from a health perspective. The revisions include: increase the dollar amount for purchases of fruits and vegetables, expand whole-grain options, allow for yoghurt as a partial milk substitute, allow parents of older infants to buy fresh produce instead of jarred infant food and give states and local WIC agencies more flexibility in meeting the nutritional and cultural needs of WIC participants²³.

Context

In Canada, social assistance is administered at the provincial/territorial level, and there are no national income support programs specific to food-related support.

Policy details

There are no specific social assistance programs relating to nutrition in Yukon, and any social assistance provided has no requirements for support to be used to purchase healthy foods, and no mechanisms are in place to monitor and/or limit what foods and beverages are purchased using food based allowances.

Comments/ notes

Policy area: Food Provision

Food-EPI vision statement: The government ensures that there are healthy food service policies implemented in government-funded settings to ensure that food provision encourages healthy food choices, and the government actively encourages and supports private companies to implement similar policies

PROV1 Policies in schools promote healthy food choices

Food-EPI good practice statement

The government ensures that there are clear, consistent policies (including nutrition standards) implemented in schools and early childhood education and care services for food service activities (canteens, food at events, fundraising, promotions, vending machines etc.) to provide and promote healthy food choices

Definitions and scope

- Early childhood education and care services (0-5): includes all early childhood care services which may be regulated and required to operate under the National Quality Framework
- Schools include government and non-government primary and secondary schools (up to year 12)
- Includes policies and nutrition standards to provide and promote healthy food choices or to limit or restrict the provision or promotion of unhealthy food choices
- Includes policies that relate to school breakfast programs, where the program is partly or fully funded, managed or overseen by the government
- Excludes training, resources and systems that support the implementation of these policies (see 'PROV3')

International examples

- **Chile:** In 2012, the Chilean government approved a Law of Nutritional Composition of Food and Advertising (Ley 20, 606)¹⁴. In June 2015, the Chilean authority approved the regulatory norms required for the law's implementation (Diario Oficial No 41.193). The regulatory norms define limits for calories, saturated fat, sugar and sodium content considered "high" in foods and beverages. The regulatory norms define limits for calories (275 calories/100g or 70 calories/100mL), saturated fat (4g/100g or 3g/100mL), sugar (10g/100g or 5g/100mL) and sodium (400mg/100g or 100mg/100mL) content considered "high" in foods and beverages. The law prohibits the sale of foods in the "high in" category in schools. These were scheduled to take effect 1 July 2016²⁹.
- **Finland:** In 2008, the National Nutrition Council approved nutrition recommendations for school meals. These include food and nutrient recommendations for salt, fibre, fat, starch, fat and salt maximums for meat and processed meat, and drinks. There are also criteria for snacks provided in schools²⁹.
- **Australia:** There are no national mandatory standards. However, six states and territories have implemented mandatory standards, which are either based on the national voluntary guidelines or nutrient and food criteria defined by the state: Australian Capital Territory (2015), New South Wales (2011), Northern Territory (2009), Queensland (2007), South Australia (2008), and Western Australia (2014). All of these states and territories identify 'red category' foods, which are either completely banned in schools or heavily restricted (e.g. offered no more than one or two times per term)²⁹. The New South Wales (NSW) policy for school canteens prohibits availability of red foods, high in saturated fats, sugars, or sodium. Foods provided in school canteens should be at least 50% green foods to ensure that canteens do not increase the number of "amber" foods. Green foods include low-fat carbohydrates, fruits and vegetables, and lean meat as well as small

portions of pure fruit juice. Also Queensland's Smart Choices school nutrition standards ensure that "red" foods and drinks are eliminated across the whole school environment.

- **Mauritius:** In 2009, a regulation was passed banning soft drinks, including diet soft drinks, and unhealthy snacks from canteens of pre-elementary, elementary and secondary schools²⁹.
- **UK:** England, Scotland, Wales and Northern Ireland have mandatory nutritional standards for school food, which also apply to food provided in schools other than school lunches. These standards apply to most state schools (with the exception of around 4,000 academies established between September 2010 and June 2014, which are exempt) and restrict foods high in fat, salt and sugar, as well as low quality reformed or reconstituted foods²⁹.
- **Brazil:** The national school feeding programme³⁰ places great emphasis on the availability of fresh, traditional and minimally processed foods. It mandates a weekly minimum of fruits and vegetables, regulates sodium content and restricts the availability of sweets in school meals. A school food procurement law³¹, approved in 2001, limits the amount of processed foods purchased by schools to 30%, and bans the procurement of drinks with low nutritional value, such as sugary drinks. The law requires schools to buy locally grown or manufactured products, supporting small farmers and stimulating the local economy. Resolution no 38 (16 July 2009) sets food- and nutrition-based standards for the foods available in the national school meal programme (Law 11.947/2009). Article 17 prohibits drinks of low nutritional value (e.g. soda), canned meats, confectionary and processed foods with a sodium and saturated fat content higher than a specified threshold.
- **Costa Rica:** Executive Decree No 36910-MEP-S (2012) of the Costa Rican Ministries of Health and Education sets restrictions on products sold to students in elementary and high schools, including food with high levels of fats, sugars and salt, such as chips, cookies, candy and carbonated sodas. Schools are only permitted to sell food and beverages that meet specific nutritional criteria. The restrictions were upheld by the Constitutional Court in 2012 following a challenge by the food industry²⁹.
- **Hungary:** Since 2012, food and beverages subject to the public health product tax may not be sold on school premises or at events organized for school children, including out of school events based on the Ministerial Decree 20/2012 (VIII.31) on the Operation of Public Education Institutions and the Use of Names of Public Education Institutions. Section 130(2) of the Decree requires the head of the educational institution to consult the school health service prior to entering into agreements with vending machine operators or food vending businesses. The school health service verifies whether the products to be sold meet the nutritional guidelines set by the National Institute of Pharmacy and Nutrition. Products that do not comply are prohibited²⁹.
- **Uruguay:** In September 2013, the government of Uruguay adopted Law No 19.140 on "healthy eating in schools". It mandated the Ministry of Health to develop standards for food available in canteens and kiosks in schools, prohibited advertising for these same foods and restricted the availability of salt shakers. The school food standards were elaborated in March 2014 in two further documents: Regulatory Decree 60/014 and the National Plan of Health Promoting Schools. The standards aimed to promote foods with natural nutritional value with a minimum degree of processing and to limit the intake of free sugars, saturated fat, trans fat and sodium. Limits are set per 100g of food, 100mL for drinks and also per 50g portion. Prohibited foods include sugary beverages and energy drinks, confectionery, salty snacks, cakes and chocolate. The school food standards and restrictions on advertising began to be implemented in public schools in 2015 and are being monitored for compliance²⁹.

Context

In Canada, education is largely decentralized to the provinces and territories, and there is no federal Department of Education. Therefore, setting nutrition standards in schools currently falls largely on provincial/territorial governments, and Ministries of Education and/or Ministries of Health (or equivalent) in each province are responsible for developing criteria for nutritional standards in schools.

National Context

In 2013, the Federal/Provincial/Territorial Nutrition Working Group on Improving the Consistency of School Food and Beverage Criteria created a technical document, the *Provincial and Territorial Guidance Document for the Development of Nutrient Criteria for Foods and Beverages in Schools 2013*, to guide and support provinces as they create and revise policies or guidelines³².

Policy details

School (2008)

School Nutrition Policy #1025, Records File #3500-31-025 recommends that schools should follow Canada's Food Guide, and in particular Eating Well with Canada's Food Guide – First Nations, Inuit and Métis. The policy suggests that schools should develop their own nutrition policy and guidelines; however, there is not overarching criteria for foods to sell or not to sell provided by the territorial government³³. This program is not mandatory or enforced.

Drop the Pop

Yukon participated in Drop the Pop from 2006 to 2012 encouraging students to drink fewer sugar sweetened beverages in favour of healthier beverages. A secondary program was offered in 2013 and 2014 called Food for Thought. Yukon does not currently offer Drop the Pop or Food for Thought (Nunavut and NWT continue to offer Drop the Pop).

Early Childhood Education:

According to the **Guidelines and Policies for Child Care and Family Dayhome Programs**³⁴, the operator of a child care program shall ensure that all children have a morning, mid-day or evening meal that includes at least a serving from each of the following four food groups:

1. Grain Products including breads, cereals, pasta, rice and bannock.
2. Milk, Bone and Milk Products including cheese and yogurt, fish with crushed bones, such as canned salmon.
3. Vegetables, Fruits, and Berries.
4. Meat, Fish, Birds, Eggs and Alternatives, including beans, nuts, tofu and nut butters.

A mid-morning, mid-afternoon or mid-evening nutritional snack must be supplied that includes at least one serving from each of the two food groups for children in attendance at those times. School age children must be supplied with an after school snack as above.

Canada's Food Guide and/or the Native Food Guide are required to be used, and foods high in sugar, salt, fats and/or nitrates are to be used in moderation and never to replace foods from the 4 food groups; however, actual limits are not established.

Comments/ notes

School Feeding Programs:

No government standards for school feeding programs were identified. The Yukon Food for Learning Association (a non-governmental organization) recently developed and released **School Food Program Guidelines** for all school feeding programs (available upon request). The guidelines are to be used by Yukon School Food Program Coordinators when menu planning and when selecting and preparing foods. They are based on Eating Well with Canada's Food Guide. The guidelines have Serve Most and Serve Sometimes recommendations. Yukon Food for Learning Association is not supported by the Government of Yukon.

***Note that this is not governmental policy and programming and should not be included in ratings for this indicator*

PROV2 Policies in public settings promote healthy food choices

Food-EPI good practice statement

The government ensures that there are clear, consistent policies in public sector settings for food service activities (canteens, food at events, fundraising, promotions, vending machines, public procurement standards etc.) to provide and promote healthy food choices.

Definitions and scope

- Public sector settings include:
 - Government-funded or managed services where the government is responsible for the provision of food, including public hospitals and other in-patient health services (acute and sub-acute, including mental health services), residential care homes, aged and disability care settings, custodial care facilities, prisons and home/community care services
 - Government-owned, funded or managed services where the general public purchase foods including health services, parks, sporting and leisure facilities, community events etc.
 - Public sector workplaces
- Includes private businesses that are under contract by the government to provide food
- Excludes 'public settings' such as train stations, venues, facilities or events that are not funded or managed by the government (see 'RETAIL4')
- Excludes school and early childhood settings (see 'PROV1')
- Includes policies and nutrition standards to provide and promote healthy food choices or to limit or restrict the provision or promotion of unhealthy food choices
- Includes the strategic placement of foods and beverages in cabinets, fridges, on shelves or near the cashier
- Includes the use of signage to highlight healthy options or endorsements (such as traffic lights or a recognised healthy symbol)
- Includes modifying ingredients to make foods and drinks more healthy, or changing the menu to offer more healthy options

International examples

- **Latvia:** In 2012, the government set salt levels for all foods served in hospitals and long-term social care institutions. Levels may not exceed 1.25g of salt per 100g of food product; fish products may contain up to 1.5g of salt per 100g of product²⁹.
- **Bermuda:** In 2008, the Government Vending Machine Policy was implemented in government offices and facilities to ensure access to healthy snacks and beverages for staff. The policy requires that all food and beverages in vending machines on government premises meet specific criteria based on levels of total fat, saturated fat, *trans* fat, sodium and sugar. Criteria exclude nuts & 100% fruit juices²⁹.
- **New York City, USA:** New York City's Food Standards (enacted with Executive Order 122 of 2008) set nutritional standards for all food purchased or served by city agencies, which applies to prisons, hospitals and senior care centres. The standards include: maximum and minimum levels of nutrients per serving; standards on specific food items (e.g. only no-fat or 1% milk); portion size requirements; the requirement that water be offered with food; a prohibition on the deep-frying of foods; and daily calorie and nutrient targets, including population-specific guidelines (e.g. children, seniors)^{29, 35}. As of 2015, 11 city agencies are subject to the NYC Food Standards, serving and selling almost 250 million meals a year. The Food Policy Coordinator has the responsibility of ensuring adherence with the Food Standards. Self-reported compliance with the standard is 96%.
- **Wales:** Vending machines dispensing crisps, chocolate and sugary drinks are prohibited in National Health Service hospitals in Wales. The Welsh government issued a guidance defining what is allowed and not allowed, and has liaised with major vending providers to find ways to introduce healthier food and drink options (Health Promoting Hospital Vending Directions and Guide 2008).

- **UK:** The UK Government Buying Standard for Food and Catering Services (GBSF of 2014, updated March 2015) by the Department of Environment, Food and Rural Affairs, sets out standards for the public sector when buying food and catering services. It is supported by the Plan for Public Procurement: Food and Catering Services (2014), which includes a toolkit consisting of the mandatory GBSF, a balanced scorecard, an e-marketplace, case studies and access to centralised framework contacts in order to improve and facilitate procurement in the public sector. The nutrition requirements have to be followed by schools, hospitals, care homes, communities and the armed forces. To improve diets, the GBSF sets maximum levels for sugar in cereals and generally for saturated fat and salt, in addition to minimum content of fibre in cereals and fruit in desserts. Meal deals have to include vegetables and fruit as dessert and menu fish on a regular basis¹.

Context

Policy details

Recreation Centres: There are no specific recommendations for recreation centres from government sources.

Public Sector Workplaces: Yukon endorses the **Eat Smart, Meet Smart guidelines** to provide ideas for healthy food choices during meetings. This includes suggestions of foods and drinks to serve that would meet recommendations for 'healthy' foods. The guidelines also include a healthy meeting checklist for planners³⁶.

Comments/ notes

A template policy for recreation directors was developed and distributed to recreation leaders in Yukon supported by the Collaborative Action on Childhood Obesity project using Coalitions Linking Action and Science for Prevention (CLASP) funding as part of the project on Healthy Foods and Beverages in Recreation in 2014; however, this policy is not publicly available (written communication, April 2017).

PROV3 Support and training systems (public sector settings)

Food-EPI good practice statement

The government ensures that there are good support and training systems to help schools and other public sector organisations and their caterers meet the healthy food service policies and guidelines

- Definitions and scope**
- Includes support for early childhood education services as defined in 'PROV1'
 - Public sector organisations includes settings defined in 'PROV2'
 - Support and training systems include guidelines, toolkits, templates (e.g. policy/guidelines or contracts), recipes and menu planning tools, expert advice, menu and product assessments, online training modules, cook/caterer/other food service staff information and training workshops or courses
- International examples**
- **Australia:** The Healthy Eating Advisory Service supports settings such as childcare centres, schools, workplaces, health services, food outlets, parks and sporting centres to provide healthy foods and drinks to the public in line with Victorian Government policies and guidelines. The Healthy Eating Advisory Service is delivered by experienced nutritionists and dietitians at Nutrition Australia Victorian Division. The support includes training cooks, chefs, food service and other key staff, discovering healthier recipes, food ideas and other helpful resources to provide healthier menus and products³⁷.
 - **Japan:** In Japanese, "Shoku" means diet and "iku" means growth and education. In 2005, Basic Law on Shokuiku was enacted and it was the first law that regulates one's diets and eating habits. It involved Cabinet Office as the leading office to plan, formulate and coordinate Shokuiku policy and strategy, in collaboration with Ministry of Health, Labour and Welfare, Ministry of Education, Culture, Sports, Science and Technology (MEXT) and Ministry of Agriculture, Forestry and Fisheries. The laws included several concepts: promotion of Shokuiku at home, schools or nursery schools and promotion of interaction between farm producers and consumers³⁸. Dietitian and registered dietitian are playing important roles to implement Shokuiku programs by providing dietary guidance in various setting. In Japan, at least one dietitian should be assigned at the facility with mass food service over 100 meals/time or over 250 meals/ day, whereas at least one registered dietitian is needed when it is over 500 meals/time or 1500 meals/day. In specific settings such as school, the Ministry of Education, Culture, Sports, Science and Technology established the Diet and Nutrition Teacher System in 2007. Diet and Nutrition Teachers are responsible to supervise school lunch programs, formulate menus and ensure hygiene standards in public elementary schools and junior high schools in accordance with the needs of local communities. They also deal with dietary education issues in collaboration with nutrition experts such as registered dietitian and dietitian³⁹. Under the revised School Lunch Act 2008, it included School Lunch Practice Standard which stipulates proper school lunch including reference intake values of energy and each nutrient as per age groups⁴⁰. Moreover, it outlined costs of facilities and manpower (e.g. cooks) to be covered by municipalities and guardians only cover the cost of ingredients, amounting an estimate of 4000 yen/month/student for school lunch program⁴¹.

Context

Policy details

The **Yukon Health and Social Services (HSS) website** offers resources for teachers (under Teacher Information Bulletin) to provide healthier food options to students (<http://www.hss.gov.yk.ca/nutrition.php>). Examples include information regarding 'Celebrating the Healthy Way', 'Energy Drinks', and 'Food as a Reward'. The website also offers static pages or documents regarding healthy eating and drinking habits.

The Government of Yukon, along with local First Nations and First Nations Health Programs developed resources on the importance of consuming traditional foods was developed, including a resource, poster, and coloring book titled **Our Culture, Our Health**^{42, 43}.

From the Ground Up

The **From the Ground Up** program is a healthy school initiative that sells boxes of Yukon grown vegetables as a fundraiser for their school. The program includes classroom resources for teachers. The program website includes additional links to resources for healthy fundraising initiatives. Boxes are also donated to local organizations such as Whitehorse Food Bank. In 2016 vegetables were purchased and shipped to Old Crow (Yukon's only fly-in community), where fresh fruits and vegetables can be very expensive.

**Comments/
notes**

PROV4 Support and training systems (private companies)

Food-EPI good practice statement

Government actively encourages and supports private companies to provide and promote healthy foods and meals in their workplaces

Definitions and scope

- For the purpose of this indicator, 'private companies' includes for-profit companies and extends to non-government organisations (NGOs) including not-for-profit/charitable organisations, community-controlled organisations, etc.
- Includes healthy catering policies, fundraising, events
- Includes support and training systems including guidelines, toolkits, templates (e.g. policy/guidelines or contracts), recipes and menu planning tools, expert advice, menu and product assessments, online training modules, cook/caterer/other food service staff information and training workshops or courses (where relevant to the provision of food in a workplace)
- Excludes the provision or promotion of food to people not employed by that organisation (e.g. visitors or customers)
- Excludes support for organisations to provide staff education on healthy foods

International examples

- **UK:** The UK responsibility deal includes collective pledges on health at work, which set out the specific actions that partners agree to take in support of the core commitments. One of the pledges is on healthier staff restaurants, with 165 signatories to date⁴⁴.
- **Victoria, Australia:** 'Healthy choices: healthy eating policy and catering guide for workplaces' is a guideline for workplaces to support them in providing and promoting healthier foods options to their staff. The guideline is supported by the Healthy Eating Advisory Service that helps private sector settings to implement such policies. Menu assessments and cook/caterer training are available free of charge to some eligible workplaces⁴⁵.
- **Singapore:** The National Workplace Health Promotion Programme, launched in Singapore in 2000, is run by the Health Promotion Board. Both private and public institutions are encouraged to improve the workplace environment by providing tools and grants. Grants are awarded to help companies start and sustain health promotion programmes. Tools include a sample Healthy Workplace Nutrition Policy, a sample Healthy Workplace Catering Policy, and a detailed Essential Guide to Workplace Health, setting out ways to transform the workplace into a health-supporting work environment²⁹.

Context

Policy details

The **Eat smart, Meet smart** guidelines described in PROV2 also apply to private companies³⁶.

Comments/ notes

Policy area: Food Retail

Food-EPI vision statement: The government has the power to implement policies and programs to support the availability of healthy foods and limit the availability of unhealthy foods in communities (outlet density and locations) and in-store (product placement)

RETAIL1 Robust government policies and zoning laws: unhealthy foods

Food-EPI good practice statement

Zoning laws and related policies provide robust mechanisms and are being used, where needed, by local governments to place limits on the density or placement of quick serve restaurants or other outlets selling mainly unhealthy foods in communities

Definitions and scope

- Includes the consideration of public health in State/Territory Planning Acts that guide the policies, priorities and objectives to be implemented at the local government level through their planning schemes
- Includes the consideration of public health in State/Territory subordinate planning instruments and policies
- Includes a State/Territory guideline that sets the policy objective of considering public health when reviewing and approving fast food planning applications
- Excludes laws, policies or actions of local governments

International examples

- **South Korea:** In 2010, the Special Act on Children's Dietary Life Safety Management established the creation of 'Green Food Zones' around schools, banning the sale of foods (fast food and soda) deemed unhealthy by the Food and Drug Administration of Korea within 200 metres of schools^{16, 46}. In 2016, Green Food Zones existed at over 10000 schools.
- **Dublin, Ireland:** Fast-food takeaways will be banned from opening within 250 metres of schools. Dublin city councillors have ruled the measure to enforce "no-fry zones", which will be included in a draft version of the council's six-year development plan. City planners will be obliged to refuse planning permission to fast food businesses if the move is formally adopted after public consultation⁴⁷.
- **Detroit, USA:** In Detroit, the zoning code prohibits the building of fast food restaurants within 500 ft. of all elementary, junior and senior high schools³.
- **UK:** Around 15 local authorities have developed "supplementary planning documents" on the development of hot food takeaways. The policies typically exclude hot food takeaways from a 400m zone around the target location (e.g. primary schools). For example, Barking and Dagenham's Local Borough Council, London, adopted a policy in 2010 restricting the clustering of hot food takeaways and banning them entirely from 400m exclusion zones around schools. In 2009, the Local Borough Council of Waltham Forest, London developed a planning policy restricting the development of hot food takeaways in local centres, and excluding them completely from areas within 10min walks from schools, parks or other youth centres. St. Helens Council adopted a planning document in 2011 and Halton in 2012³.

Context

In Canada, planning and zoning laws are typically administered at the provincial/territorial or local level. Although this varies between provinces/territories, provincial or territorial governments typically set overarching zoning legislation, and local governments are responsible for creating, implementing and enforcing municipal policies that are in line with the provincial/territorial mandates.

Policy details

The **Area Development Act** (2002) states that the “Commissioner in Executive Council” is responsible for land use planning but must follow several regulations under the act. This includes keeping public health interests a priority when designating an area for development anywhere in the province. There are no specific references to food or nutrition.

No policies were identified relating to retail zoning policy for outlets that sell unhealthy foods.

Comments/ notes

RETAIL2 Robust government policies and zoning laws: healthy foods

Food-EPI good practice statement

Zoning laws and related policies provide robust mechanisms and are being used, where needed, by local governments to encourage the availability of outlets selling fresh fruit and vegetables

Definitions and scope

- Outlets include supermarkets, produce markets, farmers' markets, greengrocers, food co-operatives
- Includes fixed or mobile outlets
- Excludes community gardens, edible urban or backyard gardens (usually regulated by local governments)
- Includes State/Territory policies to streamline and standardise planning approval processes or reduce regulatory burdens for these outlets
- Includes policies that support local governments to reduce license or permit requirements or fees to encourage the establishment of such outlets
- Includes the provision of financial grants or subsidies to outlets
- Excludes general guidelines on how to establishment and promote certain outlets
- Excludes laws, policies or actions of local governments

International examples

- **USA:** In February 2014, the US Congress formally established the Healthy Food Financing Initiative (following a three year pilot) which provides grants to states to provide financial and/or other types of assistance to attract healthier retail outlets to underserved areas. The pilot has distributed over 140 million USD in grants. To date, 23 US states have implemented financing initiatives³. For example, the New Jersey Food Access Initiative provides affordable loans and grants for costs associated with building new supermarkets, expanding existing facilities, and purchasing and installing new equipment for supermarkets offering a full selection of unprepared, unprocessed, healthy foods in under-served areas; the initiative targets both for-profit and not-for-profit organisations and food cooperatives.
- **New York City, USA:** The 'Green Cart Permit' was developed with reduced restrictions on zoning requirements to increase the availability of fresh fruits and vegetables in designated, underserved neighbourhoods³. In 2008, New York City made 1000 licences for green carts available to street vendors who exclusively sell fresh fruit and vegetables in neighbourhoods with limited access to healthy foods³. In addition, in 2009, New York City established the food retail expansion to support a health programme of New York City (FRESH). Under the programme, financial and zoning incentives are offered to promote neighbourhood grocery stores offering fresh meat, fruit and vegetables in under-served communities. The financial benefits consist of an exemption or reduction of certain taxes. The zoning incentives consist of providing additional floor area in mixed buildings, reducing the amount of required parking, and permitting larger grocery stores in light manufacturing districts.
- **Scotland:** In 2004, a small group of suppliers and retailers in Scotland established a pilot project called Healthy Living Neighbourhood Shops to increase the availability of healthier food options throughout Scotland, in both deprived and affluent areas, where little or no option existed to buy. The programme received funding from the Scottish Executive and worked closely with the Scottish Grocers' Federation, which represents convenience stores throughout Scotland. Through a number of different trials, the programme established clear criteria for increasing sales and also developed bespoke equipment/point of sale (POS) materials which were given to participating retailers free of charge. This has led to around 600 convenience stores across Scotland improving their range, quality and stock of fresh fruit and vegetables and other healthier eating products⁴⁸.

Context In Canada, planning or zoning laws are typically administered at the provincial/territorial or local level. Although this varies between provinces/territories, provincial or territorial governments typically set overarching zoning legislation, and local governments are responsible for creating, implementing and enforcing municipal policies that are in line with the provincial/territorial mandates.

Policy details There were no policies identified relating to retail zoning policy for outlets that sell healthy foods.

**Comments/
notes**

RETAIL3 In-store availability of healthy and unhealthy foods

Food-EPI good practice statement

The government ensures existing support systems are in place to encourage food stores to promote the in-store availability of healthy foods and to limit the in-store availability of unhealthy foods

Definitions and scope	<ul style="list-style-type: none">- Food stores include supermarkets, convenience stores (including 'general stores' or 'milk bars'), greengrocers and other speciality food retail outlets- Support systems include guidelines, resources or expert support- In-store promotion includes the use of key promotional sites such as end-of-aisle displays, checkouts and island bins as well as the use of shelf signage, floor decals or other promotional methods- In-store availability includes reducing or increasing supply (volume) of a product such as reducing the amount of shelf-space dedicated to sugar-sweetened drinks and confectionary, or offering fresh produce in a convenience store
International examples	<ul style="list-style-type: none">- USA: The Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) requires WIC authorised stores to stock certain healthier products (e.g. wholegrain bread)²³.

Context

Policy details No territorial policies were identified.

Comments/ notes

RETAIL4 Food service outlet availability of healthy and unhealthy foods

Food-EPI good practice statement

The government ensures support systems are in place to encourage food service outlets to increase the promotion and availability of healthy foods and to decrease the promotion and availability of unhealthy foods

Definitions and scope

- Food service outlets include for-profit quick service restaurants, eat-in or take-away restaurants, pubs, clubs
- Support systems include guidelines, resources or expert support
- Includes settings such as train stations, venues, facilities or events frequented by the public
- Excludes settings owned or managed by the government (see 'PROV2' and 'PROV4')
- Includes the strategic placement of foods and beverages in cabinets, fridges, on shelves or near the cashier
- Includes the use of signage to highlight healthy options or endorsements (such as traffic lights or a recognised healthy symbol)
- Includes modifying ingredients to make foods and drinks more healthy, or changing the menu to offer more healthy options

International examples

- **Singapore:** 'Healthier Hawker' program involved the government working in partnership with the Hawker's Association to support food vendors to offer healthier options such as reduced saturated fat cooking oil and wholegrain noodles and rice, reduced salt soy sauce and increased vegetable content. As part of the "Healthier Dining Programme" launched in June 2014 (formerly called the "Healthier Hawker" programme launched in 2011), food operators are encouraged to offer lower calorie meals and use healthier ingredients such as oils with reduced fat content, and/or whole grains without compromising taste and accessibility. To participate, food and beverage companies must complete an application form and implement nutrition guidelines set by the Health Promotion Board (HPB) in all outlets for a period of two years. Following HPB's approval the "Healthier Choice Symbol Identifiers" can be used next to the healthier dishes in all menu and marketing materials (e.g. "We serve lower-calorie options", "We use healthier oil"). To date, the HPB has partnered with 45 widely known food service providers (food courts, coffee shops, restaurants) to offer lower calorie and healthier meals across 1500 outlets and stalls. Between the launch of the programme and September 2015, the number of healthier meals sold more than doubled, from 525000 in June 2014 to 1.1 million in September 2015.
- **USA:** In December 2011, San Francisco implemented the Health Food Incentives Ordinance which bans restaurants, including takeaway restaurants, to give away toys and other free incentive items with children's meals unless the meals meet nutritional standards as set out in the Ordinance: meals must not contain more than 600 calories, 640mg sodium, 0.5g trans-fat, 35% total calories from fat and 10% calories from saturated fat and include a min amount of fruits and vegetables, while single food items and beverages must have <35% total calories from fat and <10% of calories from added caloric sweeteners. Incentives are defined as physical and digital items that appeal to children and teenagers, as well as coupons, vouchers or similar which allow access to these items. In 2010, Santa Clara county, California banned restaurants from providing toys or other incentives with menu items high in calories, sodium, fat or sugars. The law (Ordinance No NS300-820) sets nutrition standards prohibiting restaurants from linking toys or other incentives with single food items or meals with excessive calories (more than 200 for single food items and more than 485 calories for meals), excessive sodium (more than 480mg for single food item and more than 600mg for a meal), excessive fat (more than 35% for total fat), excessive saturated fat (>10%) and sugar (more than 10% total calories from caloric sweeteners) or more than 0.5g of trans fats. It also applies to drinks with excessive calories (more than 120 calories) and fat (more than 35% from fat) and excessive sugars (more than 10% from caloric sweeteners) added non-nutritive sweeteners or caffeine¹¹.

- **France:** Since January 2017, France has banned unlimited offers of sweetened beverages for free or at a fixed price in public restaurants and other facilities accommodating or receiving children under the age of 18. Sweetened beverages are defined as any drink sweetened with sugar or artificial (caloric and non-caloric) sweeteners, including flavoured carbonated and still beverages, fruit syrups, sport and energy drinks, fruit and vegetable nectars, fruit- and vegetable-based drinks, as well as water- milk- or cereal-based beverages³.

INFRASTRUCTURE SUPPORT DOMAINS

Policy area: Leadership

Food-EPI vision statement: The political leadership ensures that there is strong support for the vision, planning, communication, implementation and evaluation of policies and actions to create healthy food environments, improve population nutrition, and reduce diet-related inequalities

LEAD1 Strong, visible, political support

Food-EPI good practice statement

There is strong, visible, political support (at the Head of State / Cabinet level) for improving food environments, population nutrition, diet-related NCDs and their related inequalities

Definitions and scope

- Visible support includes statements of intent, election commitments, budget commitments, establishing priorities and targets, demonstration of support in the media, other actions that demonstrate support for new or strengthened policy
- Documents that contain evidence of strong political support include media releases, speeches, pre-election policy papers, introduction of a bill, State-level strategic plans with targets or key performance indicators
- In this case, Head of State is considered to be the Premier

International examples

- **New York City, USA:** As Mayor of New York City, Michael Bloomberg prioritised food policy and introduced a number of ground breaking policy initiatives including 'Health Bucks', a restriction on trans fats, establishment of an obesity taskforce, a portion size restriction on sugar-sweetened beverages, public awareness campaigns, etc. He showed strong and consistent leadership and a commitment to innovative approaches and cross-sectoral collaboration⁴⁹.
- **Brazil:** The Minister of Health showed leadership in developing new dietary guidelines that are drastically different from the majority of dietary guidelines created by any nation to date, and align with some of the most commonly cited recommendations for healthy eating⁵⁰.
- **CARICOM Countries:** Active NCD commissions exist in six of the 20 CARICOM member states (Bahamas, Barbados, Bermuda, British Virgin Islands, Dominica, Grenada) which are all housed in their Ministries of Health, with members recommended by the Minister of Health and appointed by the Cabinet of Government for a fixed duration; all include government agencies and to a varying degree, civil society and the private sector.

Context

National Context

In 2010, Federal/Provincial/Territorial Ministers endorsed **Curbing Childhood Obesity: A Federal, Provincial and Territorial Framework for Action to Promote Healthy Weights**, which included a mandate to "increasing the availability and accessibility of nutritious foods

and decreasing the marketing to children of foods and beverages that are high in fat, sugar and/or sodium”⁵¹.

Federal Context

Prime Minister Justin Trudeau included aspects of public health nutrition and food environment policy in the **Mandate Letter to the Minister of Health**, published in November, 2015, which included introducing new restrictions on the commercial marketing of unhealthy food and beverages to children; bringing in tougher regulations to eliminate trans fats and to reduce salt in processed foods; and improving food labels to give more information on added sugars.

In October, 2016, the Minister of Health Jane Philpott announced Health Canada’s **Healthy Eating Strategy**⁵². The strategy employs various policy levers, including legislation, regulation, guidance and education in a consistent and mutually reinforcing manner to more effectively achieve public health objectives. This is part of the Government of Canada’s **Vision for a Healthy Canada**, which includes components of Healthy Eating, Healthy Living, and Healthy Mind.

Policy details

There were no news or announcements made regarding nutrition, obesity and NCDs in 2016 on the Yukon Government website. <http://www.gov.yk.ca/news/2016.html>

Comments/ notes

The 2015 mandate letter from the Premier to the Minister of Health and Social Services available to the researchers, and therefore the content could not be analyzed.

LEAD2 Population intake targets established

Food-EPI good practice statement

Clear population intake targets have been established by the government for the nutrients of concern to meet WHO and national recommended dietary intake levels

Definitions and scope	<ul style="list-style-type: none">- Includes targets which specify population intakes according to average reductions in percentage or volume (e.g. mg/g) for salt, saturated fat, trans fats or added sugars- Excludes targets to reduce intake of foods that are dense in nutrients of concern- Typically requires the government to establish clear dietary guidelines on the maximum daily intake of nutrients of concern
International examples	<ul style="list-style-type: none">- Brazil: The "Strategic Action Plan for Confronting NCDs in Brazil, 2011-2022 specifies a target of increasing adequate consumption of fruits and vegetables, from 18.2% to 24.3 % between 2010 and 2022 and reduction of the average salt intake of 12g to 5g, between 2010 and 2022⁵³.- South Africa: The South African plan for the prevention and control of non-communicable diseases includes a target on reducing mean population intake of salt to <5g per day by 2020⁵⁴.- UK: In July 2015, the government adopted as official dietary advice the recommendation of the Advisory Committee on Nutrition that sugar should make up no more than 5% of daily calorie intake (30g or 7 cubes of sugar per day). Current sugar intake makes up 12 to 15% of energy. An evidence review by Public Health England outlines a number of strategies and interventions⁵⁵.

Context

Federal Context

The Sodium Working Group, led by Health Canada and others, recommended an interim average intake of sodium at 2,300 mg of sodium per day by 2016, and longer term goal of 95% of the population with a sodium intake below the upper limit of 2,300 mg per day. These were not formally adopted by the Canadian Government in practice⁵⁶. In the Guidance for Food Industry on Reducing Sodium in Processed Foods, one of the roles of Government is to "Support reduction of Canadians' average sodium intake to 2,300 mg per day by 2016"⁵⁷.

The Trans Fat Task Force issued recommendations for targets for *trans* fat in the food supply to align with the WHO recommendations for *trans* fats that suggest limiting intake to less than 1% of total energy intake⁵⁸. This was accepted by the Minister of Health.

Policy details

According to the report **Reducing the sodium intake of Canadians: A Provincial and Territorial Report on Progress and Recommendations for Future Action (2012)**, "Canada's Premiers have endorsed sodium reduction as an important healthy living measure, and the federal, provincial and territorial Ministers of Health and Healthy Living, except Québec, have committed to achieving an interim population average intake goal of 2,300 mg per day by 2016".

The report also identifies opportunities for the federal government to support the work that provinces and territories are doing to help achieve the 2016 sodium intake goal of 2,300 mg per person each day, as agreed to by federal, provincial and territorial ministers in September 2010.

No other territorial targets have been established regarding intake of nutrients or food groups of concern in Yukon.

**Comments/
notes**

In 2013 & 2014 Yukon Health and Social Services launched a sodium reduction awareness campaign- Salty Talk, to support sodium reduction work and aligning with recommendations for sodium reduction.

LEAD4 Comprehensive implementation plan linked to state/national needs

Food-EPI good practice statement

There is a comprehensive, transparent, up-to-date implementation plan (including priority policy and program strategies) linked to state/national needs and priorities, to improve food environments, reduce the intake of the nutrients of concern to meet WHO and national recommended dietary intake levels, and reduce diet-related NCDs

Definitions and scope

- Includes documented plans with specific actions and interventions (i.e. policies, programs, partnerships)
- Plans should be current (i.e. maintain endorsement by the current government and/or are being reported against)
- Plans may be at the state/department/branch/unit/team level and ownership may or may not be shared across government
- Plans should refer to actions to improve food environments (as defined in the policy domains above) and should include both policy and program strategies
- Excludes overarching frameworks that provide general guidance and direction

International examples

- **European Union:** The European Food and Nutrition Action Plan 2015-20 outlines clear strategic goals, guiding principles, objectives, priorities and tools. The plan aligns with the WHO Global Action Plan and under 'Objective 1 – Create healthy food and drink environments', there are clear policy and program actions identified⁵⁹.

Context

Policy details

YUKON NUTRITION FRAMEWORK

The **Yukon Nutrition Framework** was developed in 2008 and published in 2010 as a long term plan to address major nutrition issues in Yukon⁶⁰. The framework was developed by multiple stakeholders, including registered dietitians.

The Framework has 4 goals with objectives (listed below each goal):

1. Promote healthy eating practices
 - a. Develop policies and guidelines that support healthy eating
 - b. Create, expand and maintain educational programs, resources or services that provide nutrition expertise and information on healthy eating.
2. Improve Food Security
 - a. Create, maintain and sustain initiatives to improve access to adequate, safe, affordable and appropriate food for all Yukoners
3. Support special populations and their nutrition needs
 - a. Create or enhance and maintain initiatives to support optimal nutrition for special populations and their nutrition needs
4. Address nutrition-related health issues facing Yukoners
 - a. Create or support programs, resources or services that promote awareness and prevention of nutrition-related chronic disease.
 - b. Create, enhance, and maintain initiatives to support optimal clinical nutrition services for Yukoners

This program is currently under review. Communication from a government representative suggested that timelines, specific outcomes and targets have not been formally identified (personal communications, March 2017).

ON THE PATH TOGETHER: WELLNESS PLAN FOR YUKON'S CHILDREN AND FAMILIES

In 2014, the Government of Yukon developed **On the Path Together: Wellness Plan for Yukon's children and Families**⁶¹. The plan is a cross-departmental strategy to improve health and wellness among the Yukon population. The plan has 3 Pathways to wellness:

1. Getting a good start
2. Raising kids who flourish
3. Healthy living for life

Within the “**Healthy living for life**” pathway in the Wellness Plan, there is an objective to ‘Make healthy choices easier’ (Objective 3.2). The next steps for this objective include a number of policies to improve the food environment, including (not comprehensive):

- Promote food guidelines for programs serving children and youth
- Complete work with government and community partners to improve Healthy Food and Beverages served or sold in recreational settings
- Complete work with government and community partners to roll out Healthy Beginnings messages (health eating, activity, and screen time for pre-school children) and Nutritional Guidelines for child care programs
- Continue to support school breakfast programs
- Address and provide clarity on the use of wild game in meals for children, youth and others attending child care and other community programs when amending food regulations under the **Public Health and Safety Act**

The document identifies the ministries that would be primarily responsible for implementing each of the next steps (for example, Health and Social Services, Community Services, or Yukon Education). The document acknowledges that they should work with colleagues at the national level to implement some food policies (e.g., sodium content in foods, nutrition labeling, marketing to children).

Communication from a government representative stated that given the recent government changes, the endorsement and implementation of this document is unclear at this time (written communication, April 2017).

YUKON LOCAL FOOD STRATEGY

In October 2016, Yukon launched the **Local Food Strategy for Yukon 2016-2021**⁶². The strategy is targeted at long term development of the agriculture sector, enhancing food security and increasing access to local food.

YUKON AGRICULTURE POLICY

There is a Yukon Agriculture Policy titled **Vision for Yukon Agriculture: 2006 Yukon Agriculture Policy**. This policy framework includes a vision that Yukon develops “an industry that significantly increases its products of healthy locally grown food for local consumption”⁶³.

**Comments/
notes**

LEAD5 Priorities for reducing inequalities

Food-EPI good practice statement

Government priorities have been established to reduce inequalities or protect vulnerable populations in relation to diet, nutrition, obesity and NCDs

Definitions and scope

- Frameworks, strategies or implementation plans specify aims, objectives or targets to reduce inequalities including taking a preventive approach that addresses the social and environmental determinants of health
- Frameworks, strategies or implementation plans identify vulnerable populations or priority groups
- Implementation plans specify policies or programs that aim to reduce inequalities for specific population groups
- Excludes priorities to reduce inequalities in secondary or tertiary prevention

International examples

- **New Zealand:** The Ministry of Health reports the estimates derived from health surveys and nutrition surveys by four subpopulation groups including age group, gender, ethnic group and an area level deprivation index. Similarly, estimates derived from other data types (e.g. mortality) are presented by these subpopulation groups. The contracts between MoH and NGOs or other institutions include a section on Maori Health and state: “An overarching aim of the health and disability sector is the improvement of Maori health outcomes and the reduction of Maori health inequalities. You must comply with any: a) Maori specific service requirements, b) Maori specific quality requirements and c) Maori specific monitoring requirements”. In addition, the provider quality specifications for public health services include specific requirements for Maori:” C1 Services meet needs of Maori, C2 Maori participation at all levels of strategic and service planning, development and implementation within organisation at governance, management and service delivery levels, C3: support for Maori accessing services”. In the specific contract between the Ministry of Health and Agencies for Nutrition Action, the first clause is on Maori Health: “you must comply with any Maori specific service requirements, Maori specific quality requirements and Maori specific monitoring requirements contained in the Service specifications to this agreement”.
- **Australia:** The National Indigenous Reform Agreement (Closing the Gap) is an agreement between the Commonwealth of Australia and the States and Territories. The objective of this agreement is to work together with Indigenous Australians to close the gap in Indigenous disadvantage. The targets agreed to by COAG relate to health or social determinants of health. For the target ‘Closing the life expectancy gap within a generation (by 2031)’, one of the performance indicators is the prevalence of overweight and obesity.

Context

Policy details **Yukon Nutrition Framework** (see LEAD4)

The **Yukon Nutrition Framework** includes initiatives to “create or enhance and maintain initiatives to support optimal nutrition for special populations and the nutrition needs’, and includes First Nation people, and persons living with mental illness and/or cognitive disabilities, who are at increased risk of Type 2 diabetes, heart disease and some cancers. The plan specifically sets out to work with First Nation governments and organizations to build partnerships and programming.

Health and Social Services Strategic Plan 2014-2019

In addition, the **Health and Social Services Strategic Plan 2014-2019** includes a focus on “Safety and well-being for vulnerable and ‘hard-to-serve’ populations and those with complex conditions”, including vulnerable and hard-to-serve persons⁶⁴. This strategy is still relevant despite a new government since the development of the plan.

Poverty Reduction Strategy

In 2012, the Government of Yukon released **A Better Yukon for All: Government Of Yukon's Social Inclusion and Poverty Reduction Strategy**, supported by the premier at the time. This includes a goal to reduce inequities⁶⁵. The prevalence of obesity is included as one of the social inclusion indicators for the territory. The status of the new poverty reduction is not clear under the new government (written communication, April 2017).

Forward Together: Yukon Mental Wellness Strategy 2016-2026⁶⁶

Within the most recent Yukon Mental Wellness Strategy, there are several objectives that relate to health promotion and disease prevention.

Strategic Priority #1: Promotion and Prevention includes:

Objective 1.1 Create opportunities to promote wellness across the lifespan with a key focus on prenatal and early childhood development, seniors' wellness and at risk areas, and lifespan transition points.

Objective 1.2 Raise awareness and compassion for those individuals, families and caregivers experiencing mental health disorders, substance abuse issues and mental health problems and distress.

This strategy was developed by the new government and is relevant at the current time.

**Comments/
notes**

Policy area: Governance

Food-EPI vision statement: Governments have structures in place to ensure transparency and accountability, and encourage broad community participation and inclusion when formulating and implementing policies and actions to create healthy food environments, improve population nutrition, and reduce diet-related inequalities

GOVER1 Restricting commercial influence on policy development

Food-EPI good practice statement

There are robust procedures to restrict commercial influences on the development of policies related to food environments where they have conflicts of interest with improving population nutrition

Definitions and scope

- Includes government policies, guidelines, codes of conduct or other mechanisms to guide actions and decision-making by government employees, for example conflict of interest declaration procedures
- Includes procedures to manage partnerships with private companies or peak bodies representing industries that are consulted for the purpose of developing policy, for example committee procedural guidelines or terms of reference
- Includes publicly available, up-to-date registers of lobbyist and/or their activities

International examples

- **USA:** Mandatory and publicly accessible lobby registers exist at the federal level, as well as in nearly every state. Financial information must be disclosed, and the register is enforced through significant sanctions. A number of pieces of legislation uphold compliance with the register including Lobbying Disclosure Act of 1995 and the Honest Leadership and Open Government Act 2007.
- **New Zealand:** The State Services Commission has published Best Practice Guidelines for Departments Responsible for Regulatory Processes with Significant Commercial Implications. They cover the development and operation of a regulatory process and include specific references to principles around stakeholder relationship management⁶⁷.
- **Australia:** The Australian Public Service Commission's Values and Code of Conduct includes a number of relevant sections such as the Conflict of Interest, Working with the Private Sector and other Stakeholders and the Lobbying Code of Conduct.

Context

Federal Context There is currently a ban on political contributions from corporations, trade unions, associations and groups federally.

Provincial Context Provincially, Alberta, Manitoba, Quebec, Ontario and Nova Scotia prohibit corporate and union donations.

Policy details

In 2014, the government tabled **The Paid Lobbying Act**, which would have required territorial consultant lobbyists or in-house lobbyists to register. The Act never received assent.

Conflict of Interest (Members and Ministers) Act⁶⁸ – Ministers must disclose all engagement with any businesses or corporations. They cannot participate in the making of a decision in the legislative Assembly or in the Cabinet to further their own private interests. This precludes members or ministers from accepting fees, benefits or gifts in connection with performance of their public duties. A Conflict of Interest Commission has been established to advise members, ministers and former ministers about whether or not they are or would be in conflict of interest

According to the ***Elections Act***⁶⁹, the government may not accept any anonymous contribution. Donations made at meetings or rallies held for political purposes are deemed not to be anonymous. Any donations by unincorporated groups such as trade unions or political parties must be accompanied with a statement including the name and address of the trade union, and then name and address of an individual who is a principal. For any donations made, receipts must be issued. These receipt forms must be made available to the chief electoral office upon request. Each registered political party must file an annual revenue return. In addition, a candidate or registered political party shall not accept a contribution of more than \$50 from an unincorporated group unless it is accompanied by a statement disclosing the individual and address of the group. Information on annual contributions to political parties in the calendar year are published by the Chief Electoral Officer of Yukon in accordance with the ***Elections Act***.

**Comments/
notes**

GOVER2 Use of evidence in food policies

Food-EPI good practice statement

Policies and procedures are implemented for using evidence in the development of food policies

Definitions and scope

- Includes policies, procedures or guidelines to support government employees in the use of evidence for policy development including best practice evidence review methodology (including types and strength of evidence needed) and policy implementation in the absence of strong evidence (where the potential risks or harms of inaction are great)
- Includes policies, procedures or guidelines that stipulate the requirements for the establishment of a scientific or expert committee to inform policy development
- Includes the use of evidence-based models, algorithms and tools to guide policy development or within policy to guide implementation (e.g. nutrient profiling model)
- Includes government resourcing of evidence and research by specific units, either within or across government departments

International examples

- **Australia:** The National Health and Medical Research Council Act 1992 (NHMRC Act) requires NHMRC to develop evidence-based guidelines. These national guidelines are developed by teams of specialists following a rigorous nine-step development process⁷⁰.

Context

Policy details

According to the **Government of Yukon Science Strategy**⁷¹ (January 2016) – in order to support evidence based decision making, the Government of Yukon has recognized the importance of science and innovation. The government will provide funding to increase and maintain current scientific knowledge. This is not specific to nutrition and food policies.

The Wellness Strategy includes an action to “adopt evidence-based guidelines developed by recognized experts to guide decision-making about new or enhance programs.” Given recent governmental changes, the endorsement and implementation of this strategy are unclear at this time.

Forward Together: Yukon Mental Wellness Strategy 2016-2026⁶⁶ includes “Evidence-Based Design and Practice” as a guiding principle.

Comments/ notes

GOVER3 Transparency for the public in the development of food policies

Food-EPI good practice statement

Policies and procedures are implemented for ensuring transparency in the development of food policies

Definitions and scope	<ul style="list-style-type: none">- Includes policies or procedures to guide the online publishing of private sector and civil society submissions to government around the development of policy and subsequent government response to these- Includes policies or procedures that guide the use of consultation in the development of food policy- Includes policies or procedures to guide the online publishing of scoping papers, draft and final policies- Include policies or procedures to guide public communications around all policies put forward but not progressed
International examples	<ul style="list-style-type: none">- Australia / New Zealand: Food Standards Australia New Zealand (FSANZ) is required by the Food Standards Australia New Zealand Act 1991 to engage stakeholders in the development of new standards. This process is open to everyone in the community including consumers, public health professionals, and industry and government representatives. FSANZ has developed a Stakeholder Engagement Strategy 2013-16 that outlines the scope and processes for engagement. Under the Stakeholder Engagement Priorities 2013-16, it outlines “maintain our open and transparent approach” as one of the first priorities⁷².

Context

Policy details There are no official policies relating to the transparency in the development of policies in Yukon.

Comments/ notes

GOVER4 Access to government information

Food-EPI good practice statement

The government ensures public access to comprehensive information and key documents (e.g. budget documents, annual performance reviews and health indicators) related to public health nutrition and food environments

Definitions and scope	<ul style="list-style-type: none">- Includes policies and procedures to guide the timely, online publishing of government budgets, performance reviews, audits, evaluation reports or the findings of other reviews or inquiries- Includes 'freedom of information' legislation and related processes to enable the public access to government information on request, with minimal restrictions and exemptions- Includes policies or procedures to guide the timely, online publishing of population health data captured / owned by government
International examples	<ul style="list-style-type: none">- Australia / New Zealand: The Freedom of Information Act provides a legally enforceable right of the public to access documents of government departments and most agencies.

Context

Policy details

According to the **Access to Information and Protection of Privacy Act⁷³**, citizens can submit access to information that is held by public bodies. The records manager must respond to applicant not later than 30 days after a request has been received. There is a fee associated with accessing information, which can be waived by the records manager at the request of the applicant if the payment would impose unreasonable financial hardship on the applicant. Information regarding advice, proposals, recommendations, analyses or policy options developed by or for a public body or a Minister may be refused to be given.

Yukon's Chief Medical Officer of Health **releases a report every 3 years**, which provides an overview of the health of Yukoners, including statistics on chronic disease prevalence, life expectancy, and mental health⁷⁴.

Budget documents are available online.

Comments/ notes

Policy area: Monitoring & Intelligence

Food-EPI vision statement: The government's monitoring and intelligence systems (surveillance, evaluation, research and reporting) are comprehensive and regular enough to assess the status of food environments, population nutrition and diet-related NCDs and their inequalities, and to measure progress on achieving the goals of nutrition and health plans

MONIT1 Monitoring food environments

Food-EPI good practice statement

Monitoring systems, implemented by the government, are in place to regularly monitor food environments (especially for food composition for nutrients of concern, food promotion to children, and nutritional quality of food in schools and other public sector settings), against codes / guidelines / standards / targets

Definitions and scope

- Includes monitoring systems funded fully or in part by government that are managed by an academic institution or other organisation
- Includes regular monitoring and review of the impact of policies implemented by the government on food environments (as relevant to the individual State / Territory, and described in the policy domains above), in particular:
 - Monitoring of compliance with voluntary food composition standards related to nutrients of concern in out-of-home meals (as defined in the 'Food composition' domain)
 - Monitoring of compliance with food labelling regulations (as defined in the 'Food labelling' domain above)
 - Monitoring of unhealthy food promoted to children via broadcast and non-broadcast media and in children's settings (as defined in the 'Food promotion' domain above)
 - Monitoring of compliance with food provision policies in schools, early childhood services and public sector settings (as defined in the 'Food provision' domain above)

International examples

- **Many countries** have food composition databases available. For example, the New Zealand Institute for Plant & Food Research Limited and the Ministry of Health jointly own the New Zealand Food Composition Database (NZFCD), which is a comprehensive collection of nutrient data in New Zealand containing nutrient information on more than 2600 foods.
- **New Zealand:** A national School and Early Childhood Education Services (ECES) Food and Nutrition Environment Survey was organised in all schools and ECES across New Zealand in 2007 and 2009 by the MoH to measure the school and ECES food environments.
- **UK:** In October 2005, the School Food Trust ('the Trust'; now called the Children's Food Trust) was established to provide independent support and advice to schools, caterers, manufacturers and others on improving the standard of school meals. They perform annual surveys, including the latest information on how many children are having school meals in England, how much they cost and how they're being provided⁷⁵.

Context

The Yukon Government publishes reports on the health status of the Yukon population. The most recent report is the Yukon Health Status Report 2015⁷⁴. This does not include primary data collection, but synthesizes information from Statistics Canada and the Canadian Community Health Survey, among others, to illustrate a picture of the health of Yukoners,

**Policy
details**

The reports on the Health Status of the Yukon population do not include specific assessment of food environments⁷⁴.

Monitoring food composition for nutrients of concern

No documents were identified.

Monitoring of marketing of unhealthy foods to children

No documents were identified.

Monitoring of nutrition quality of food in schools and early childhood education services

No documents were identified.

Monitoring of nutritional quality of food in public sector settings

Yukon was one of the participating jurisdictions that was part of the Healthy Foods and Beverages in Recreation in 2014, supported by the Collaborative Action on Childhood Obesity project using Coalitions Linking Action and Science for Prevention (CLASP). As part of the project, an audit of foods and beverages served in recreation facilities during community events and programs was conducted. ***Note that was not funded by the territorial government and is not currently scheduled to be repeated.***

**Comments/
notes**

MONIT2 Monitoring nutrition status and intakes

Food-EPI good practice statement

There is regular monitoring of adult and childhood nutrition status and population intakes against specified intake targets or recommended daily intake levels

Definitions and scope	<ul style="list-style-type: none">- Includes monitoring of adult and child intake in line with Canada's Food Guide and Canadian dietary recommendations- Includes monitoring of adult and child intake of nutrients of concern and non-core/discretionary foods including sugar-sweetened beverages (even if there are no clear intake targets for all of these)- 'Regular' is considered to be every five years or more frequently
International examples	<ul style="list-style-type: none">- USA: The National Health and Nutrition Examination Survey (NHANES) is a program of studies designed to assess the health and nutritional status of adults and children in the United States. The survey is unique in that it combines interviews and physical examinations⁷⁶. The NHANES program began in the early 1960s and has been conducted as a series of surveys focusing on different population groups or health topics. In 1999, the survey became a continuous program that has a changing focus on a variety of health and nutrition measurements to meet emerging needs. The survey examines a nationally representative sample of about 5,000 persons each year. These persons are located in counties across the country, 15 of which are visited each year.

Context

Federal Context

Federally, Statistics Canada and Health Canada conduct two annual surveys: The Canadian Community Health Survey (CCHS) and The Canadian Health Measures Survey (CHMS). The CCHS is a nationally representative health survey conducted annually. The annual component includes one 6-question food frequency screener regarding dietary intake of fruits and vegetables. The Nutrition Focus component of CCHS collects one 24-hour recall from the entire sample, and two recalls among a subset of participants. The Nutrition focus was conducted in 2004, and again in 2015. The CHMS is a biospecimen survey that is conducted biannually. This information is available and considered representative at the provincial level.

Territorial Context

In 2009, the Recreation and Parks Association of the Yukon conducted the **Yukon Healthy Living Segmentation Study**, and some support was provided by the DHSS. A telephone survey conducted among 850 Yukoners. Participants were asked how often they included fruit and or/vegetables, soda pop or other sugared drinks, fast food/chips/junk food, milk or milk and alternatives, and 100% fruit juice in the breakfast, lunch, snacks or dinner, and some support was provided by the Department of Health and Social Services. This has not since been repeated.

Policy details

As the CCHS Nutrition Survey is not conducted in the territories, Yukon does not have territorial data on dietary intake, and relies on the 6-question food frequency screener regarding dietary intake of fruits and vegetables from the CCHS Annual survey.

Yukon participates in the international **Health Behaviours of School Aged Children Survey (HBSC)**⁷⁷. In 2010 and 2014, the survey included a representative sample of young people from Yukon. The HBSC Survey was conducted by the Yukon Bureau of Statistics, on behalf of SPEG/Queen's University, and the Yukon Government Departments of Health & Social Services and Education. The sample included every student in Grades 6 to 10 in the territory, for an overall sample size of 1,343 questionnaires completed.

The Health and Health-Related Behaviours Among Young People in Yukon survey (conducted as part of the HSBC) collected data on how often they consumer fruit, vegetables, sweets/candy/chocolate, soft drinks with sugar, diet soft drinks, potato chips, meat alternatives, orange vegetables, fruit juice, energy drinks, sports drinks, and game from hunting⁷⁸.

**Comments/
notes**

MONIT3 Monitoring Body Mass Index (BMI)

Food-EPI good practice statement

There is regular monitoring of adult and childhood overweight and obesity prevalence using anthropometric measurements

Definitions and scope

- Anthropometric measurements include height, weight and waist circumference
- 'Regular' is considered to be every five years or more frequently

International examples

- **UK:** England's National Child Measurement Programme was established in 2006 and aims to measure all children in England in the first (4-5 years) and last years (10-11 years) of primary school. In 2011-2012, 565,662 children at reception and 491,118 children 10-11 years were measured⁷⁹.

Context

Federal Context

Federally, the annual component of CCHS collects self-reported height and weight, while the Nutrition Focus in 2004 and 2015 also collected measured height and weight for most participants. CHMS collects self-reported height and weight, and physical measures of standing height, sitting height, weight, waist circumference, hip circumference.

Policy details

The **Health and Health-Related Behaviours Among Young People in Yukon survey** (HSBC) collected self-reported height and weight to calculate BMI info for students in grades 6-10⁷⁸.

Comments/ notes

MONIT4 Monitoring NCD risk factors and prevalence

Food-EPI good practice statement

There is regular monitoring of the prevalence of NCD risk factors and occurrence rates (e.g. prevalence, incidence, mortality) for the main diet-related NCDs

Definitions and scope

- Other NCD risk factors (not already covered by 'MONIT1', 'MONIT2' and 'MONIT3') include level of physical activity, smoking, alcohol consumption.
- Diet-related NCDs include, amongst others, hypertension, hypercholesterolaemia, Type 2 Diabetes, cardiovascular disease (including ischaemic heart disease, cerebrovascular disease and other diseases of the vessels), diet-related cancers
- 'Regular' is considered to be every five years or more frequently
- May be collected through a variety of mechanisms such as population surveys or a notifiable diseases surveillance system

International examples

- **OECD countries:** Most OECD countries have regular and robust prevalence, incidence and mortality data for the main diet-related NCDs and NCD risk factors.

Context

Federal Context

Federally, the CCHS annual component collects information on self-reported physical activity, smoking and alcohol consumption. CHMS collects physical activity data using accelerometers. CCHS also collects information on self-reported prevalence of being diagnosed with a number of diet-related NCDs including hypertension, diabetes, heart disease and some cancers.

Policy details

The **Health and Health-Related Behaviours Among Young People in Yukon survey** (HSBC) collected a wide variety of NCD-related data on students in grades 6-10, including physical activity, sedentary behaviour, smoking, and alcohol use⁷⁸.

British Columbia and Yukon share a **cancer registry**, run by the BC Cancer Agency and supported in part by Yukon Health and Social Services.

Comments/ notes

Yukon Healthy Living Study monitors Yukoners' lifestyles related to physical activity and recreation (sponsored by Rec and Parks Association of Yukon)⁸⁰. The survey was conducted in 2010.

MONIT5 Evaluation of major programmes

Food-EPI good practice statement

There is sufficient evaluation of major programs and policies to assess effectiveness and contribution to achieving the goals of the nutrition and health plans

Definitions and scope	<ul style="list-style-type: none">- Includes any policies, guidelines, frameworks or tools that are used to determine the depth and type (method and reporting) of evaluation required- Includes a comprehensive evaluation framework and plan that aligns with the key preventive health or nutrition implementation plan- The definition of a major programs and policies is to be defined by the relevant government department- Evaluation should be in addition to routine monitoring of progress against a project plan or program logic
International examples	<ul style="list-style-type: none">- USA: The National Institutes for Health (NIH) provides funding for rapid assessments of natural experiments. The funding establishes an accelerated review/award process to support time-sensitive research to evaluate a new policy or program expected to influence obesity related behaviours (e.g., dietary intake, physical activity, or sedentary behaviour) and/or weight outcomes in an effort to prevent or reduce obesity⁸¹.

Context

Policy details

There is currently no ongoing evaluation of the Nutrition Strategy or the Wellness Plan.

No program evaluation guides at the territorial level were identified.

Comments/ notes

MONIT6 Monitoring progress on reducing health inequalities

Food-EPI good practice statement

Progress towards reducing health inequalities or health impacts in vulnerable populations and social determinants of health are regularly monitored

Definitions and scope

- Monitoring of overweight and obesity and main diet-related NCDs includes stratification or analysis of population groups where there are the greatest health inequalities including Indigenous peoples and socio-economic strata
- Includes reporting against targets or key performance indicators related to health inequalities

International examples

- **New Zealand:** All annual Ministry of Health Surveys report estimates by subpopulations in particular by ethnicity (including Maori and Pacific peoples), by age, by gender, and by New Zealand area deprivation.

Context

Policy details

There is currently no monitoring of the **Social Inclusion** or the **Poverty Reduction strategy**.

The most recent **Health Status Report (2015)** does not report on differences in health behaviours or outcomes between socioeconomic groups.

Comments/ notes

Policy area: Funding & resources

Food-EPI vision statement: Sufficient funding is invested in 'Population Nutrition' to create healthy food environments, improved population nutrition, reductions in obesity, diet-related NCDs and related inequalities

FUND1 Population nutrition budget

Food-EPI good practice statement

The 'population nutrition' budget, as a proportion of total health spending and/or in relation to the diet-related NCD burden is sufficient to reduce diet-related NCDs

Definitions and scope

- 'Population nutrition' includes promotion of healthy eating, and policies and programs that support healthy food environments for the prevention of obesity and diet-related NCDs
- The definition **excludes** all one-on-one and group-based promotion (primary care, antenatal services, maternal and child nursing services etc.), food safety, micronutrient deficiencies (e.g. folic acid fortification) and undernutrition
- Please provide estimates for the budget allocated to the unit within the Department of Health that has primary responsibility for population nutrition. The 'Population Nutrition' budget should include workforce costs (salaries and associated on-costs) and program budgets for the 2015-16 financial year (regardless of revenue source), reported separately.
- The workforce comprises anyone whose primary role relates to population nutrition and who is employed full time, part time or casually by the Department of Health or contracted by the Department of Health to perform a population nutrition-related role (including consultants or funding of a position in another government or non-government agency).
- Exclude budget items related to physical activity promotion. If this is not feasible (for example, a program that combines both nutrition and physical activity elements), please highlight where this is the case
- With regards to 'health spending', please provide the total budget of the Department of Health or relevant department/ministry for the 2016-17 financial year

International examples

NOTE THESE ARE EXAMPLES ONLY: NO BENCHMARKS ARE AVAILABLE

- **New Zealand:** The total funding for population nutrition was estimated at about \$67 million or 0.6% of the health budget during 2008/09 Healthy Eating Healthy Action period. Dietary risk factors account for 11.4% of health loss in New Zealand.
- **Thailand:** According to the most recent report on health expenditure in 2012, the government greatly increased budget spent on policies and actions related to nutrition (excluding food, hygiene and drinking water control). Total expenditure on health related to nutrition specifically from local governments was 29,434.5 million baht (7.57% of total health expenditure from public funding agencies), which was ten times over the budget spending on nutrition in 2011. Dietary risk factors account for more than 10% of health loss in Thailand.

Context

Policy details

The 2016-2017 Budget Main Estimates for Yukon were \$1,298,767,000.

Of this, the Health and Social Services budget is \$460,511,000. The proportion of this allocated to public health or population nutrition is unclear; however a statement from the Department of Health and Social Services shared that the Health Promotion Unit allocated approximately \$140,000 towards healthy eating projects (including programming and personnel expenditures) (written communication, March 2017).

**Comments/
notes**

FUND2 Research funding for obesity & NCD prevention

Food-EPI good practice statement

Government funded research is targeted for improving food environments, reducing obesity, NCDs and their related inequalities

Definitions and scope

- Includes the clear identification of research priorities related to improving food environments, reducing obesity, NCDs and their related inequalities in health or medical research strategies or frameworks
- Includes identifying research projects conducted or commissioned by the government specifically targeting food environments, prevention of obesity or NCDs (excluding secondary or tertiary prevention)
- It is limited to research projects committed to or conducted within the last 12 months.
- Excludes research grants administered by the government (including statutory agencies) to a research group where the allocation of a pool of funding was determined by an independent review panel
- Excludes evaluation of interventions (this is explored in 'MONIT5' and should be part of an overall program budget)

International examples

NOTE THESE ARE EXAMPLES ONLY: NO BENCHMARKS ARE AVAILABLE

- **Australia:** The National Health and Medical Research Council (NHMRC) Act requires the CEO to identify major national health issues likely to arise. The National Health Priority Areas (NHPAs) articulate priorities for research and investment and have been designated by Australian governments as key targets because of their contribution to the burden of disease in Australia. For the 2015-16 Corporate Plan, obesity, diabetes and cardiovascular health are three of these NHPAs.
- **Thailand:** The National Research Council funded more research projects on obesity and diet-related chronic diseases (such as diabetes, cardiovascular diseases and hypertension) in 2014, accountable for almost six times over the research funding in 2013 (from 6,875,028 Baht in 2013 to 37,872,416 baht in 2014).

Context

Federal Context

The main research funding for population nutrition in Canada is the Canadian Institutes of Health Research (CIHR). CIHR has funding opportunities for food environment, obesity and NCD research, as well as inequalities, primarily through the Institute for Nutrition, Metabolism and Diabetes and the Institution of Population and Public Health.

Health Canada and PHAC have some opportunities for funding the Grants and Contributions, etc., which are provided on a case-by-case basis.

Policy details

No government-funded research projects were identified.

Comments/ notes

FUND3 Health promotion agency

Food-EPI good practice statement

There is a statutory health promotion agency in place, with a secure funding stream, that includes an objective to improve population nutrition

Definitions and scope	<ul style="list-style-type: none">- Agency was established through legislation- Includes objective to improve population nutrition in relevant legislation, strategic plans or on agency website- Secure funding stream involves the use of a hypothecated tax or other secure source
International examples	<ul style="list-style-type: none">- Australia: The Victorian Health Promotion Foundation (VicHealth) was the world's first health promotion foundation, established by the Victorian Parliament as part of the Tobacco Act of 1987 (for the first 10 years through a hypothecated tobacco tax) through which the objectives of VicHealth are stipulated. VicHealth continues to maintain bipartisan support.

Context Within Yukon, the Department of Health and Social Services is responsible for implementing health programming. The Health Promotion Unit is a department within the Department of Health and Social Services, which “provides or supports evidence-based, targeted health promotion and illness prevention programs and activities, to increase public awareness, support healthier decision making and lifestyles, support professional development and collaboration, and create and promote supportive environments.”

Policy details There is no statutory health promotion agency in Yukon.

Comments/ notes

Policy area: Platforms for Interaction

Food-EPI vision statement: There are coordination platforms and opportunities for synergies across government departments, levels of government, and other sectors (NGOs, private sector, and academia) such that policies and actions in food and nutrition are coherent, efficient and effective in improving food environments, population nutrition, diet-related NCDs and their related inequalities

PLATF1 Coordination mechanisms (national, state and local government)

Food-EPI good practice statement

There are robust coordination mechanisms across departments and levels of government (national, state and local) to ensure policy coherence, alignment, and integration of food, obesity and diet-related NCD prevention policies across governments

Definitions and scope

- Includes cross-government or cross-departmental governance structures, committees or working groups (at multiple levels of seniority), agreements, memoranda of understanding, etc.
- Includes cross-government or cross-departmental shared priorities, targets or objectives
- Includes strategic plans or frameworks that map the integration and alignment of multiple policies or programs across governments and across departments
- Includes cross-government or cross-departmental collaborative planning, implementation or reporting processes, consultation processes for the development of new policy or review of existing policy

International examples

- **Finland:** The Finnish National Nutrition Council is an inter-governmental expert body under the Ministry of Agriculture and Forestry with advisory, coordinating and monitoring functions. It is composed of representatives elected for three-year terms from government authorities dealing with nutrition, food safety, health promotion, catering, food industry, trade and agriculture²⁸.
- **Malta:** Based on the Healthy Lifestyle Promotion and Care of NCDs Act (2016), Malta established an inter-ministerial Advisory Council on Healthy Lifestyles in August 2016 to advise the Minister of Health on any matter related to healthy lifestyles. In particular, the Advisory Council advises on a life course approach to physical activity and nutrition, and on policies, action plans and regulations intended to reduce the occurrence of NCDs. The prime minister appoints the chair and the secretary of the Advisory Council, while the ministers of education, health, finance, social policy, sports, local government, and home affairs appoint one member each²⁸.
- **Australia:** There are several forums and committees for the purpose of strengthening food regulation with representation from New Zealand and Health Ministers from Australian States and Territories, the Australian Government, as well as other Ministers from related portfolios (e.g. Primary Industries). Where relevant, there is also representation from the Australian Local Government Association.

Context

All provinces and territories are part of the Federal, Provincial Territorial Group on Nutrition. This group includes representatives from all provincial governments and territorial governments departments of health, or the department responsible for health, and meets quarterly.

**Policy
details**

There was previously a **Healthy Living Committee** which contributed to the Wellness plan and other initiatives. This committee is currently on hiatus and the status is uncertain.

No other committees or groups were identified.

**Comments/
notes**

PLATF2 Platforms for government and food sector interaction

Food-EPI good practice statement

There are formal platforms between government and the commercial food sector to implement healthy food policies

Definitions and scope

- The commercial food sector includes food production, food technology, manufacturing and processing, marketing, distribution, retail and food service, etc. For the purpose of this indicator, this extends to commercial non-food sectors (e.g. advertising and media, sports organisations, land/housing developers, private childcare, education and training institutes) that are indirectly related to food
- Includes established groups, forums or committees active within the last 12 months for the purpose of information sharing, collaboration, seeking advice on healthy food policies
- Includes platforms to support, manage or monitor private sector pledges, commitments or agreements
- Includes platforms for open consultation
- Includes platforms for the government to provide resources or expert support to the commercial food sector to implement policy
- Excludes joint partnerships on projects or co-funding schemes
- Excludes initiatives covered by 'RETAIL3' and 'RETAIL4'

International examples

- **UK:** The UK 'Responsibility Deal' was a UK government initiative to bring together food companies and non-government organisations to take steps (through voluntary pledges) to address NCDs during 2010-2015. It was chaired by the Secretary of State for Health and included senior representatives from the business community (as well as NGOs, public health organisations and local government). A number of other subgroups were responsible for driving specific programs relevant to the commercial food sector.

Context

Policy details

The Department of Energy, Mines and Resources (which houses Agriculture) participates in the **Agriculture Industry Advisory Committee** to support and target industry development.

No other committees or groups were identified.

Comments/ notes

PLATF3 Platforms for government and civil society interaction

Food-EPI good practice statement

There are formal platforms for regular interactions between government and civil society on food policies and other strategies to improve population nutrition

- Definitions and scope**
- Civil society includes community groups and consumer representatives, NGOs, academia, professional associations, etc.
 - Includes established groups, forums or committees active within the last 12 months for the purpose of information sharing, collaboration, seeking advice
 - Includes platforms for consultation on proposed plans, policy or public inquiries
 - Excludes policies or procedures that guide consultation in the development of food policy (see 'GOVER3')

- International examples**
- **Brazil:** The National Council of Food and Nutrition Security (CONSEA) is a body made up of civil society and government representatives, which advises the President's office on matters involving food and nutrition security⁸². CONSEA is made up from one-third government and two-thirds non-government executives and workers. It has special powers. It is housed in and reports to the office of the president of the republic. It is responsible for formulating and proposing public policies whose purpose is to guarantee the human right to healthy and adequate food. There are also CONSEAs at state and municipal levels that deal with specific issues, also responsible for organising CONSEA conferences at their levels. CONSEAs are charged to represent Brazilian social, regional, racial and cultural diversity at municipal, state or national level. The elected politicians in Brazil's parliament formally have the power to challenge and even overturn proposals made by CONSEA. In practice it is most unlikely that any Brazilian government whether of the left or right would wish to do so, partly because of the constitutional status of the CONSEA system, and also because, being so carefully representative of all sectors and levels of society, it remains strong and popular.

Context

Policy details

The Department of Agriculture works with the **Artic Institute of Community Based Research (AICBR)** which leads a group that talks about Yukon's food system and AICBR spearheads the Community Garden Gathering, which targets first nation community growers and foster the growing and consumption of healthy foods.

No additional committees were identified that specifically engaged civil society groups.

Comments/ notes

The Government of Yukon has a specific consultation process for consulting with Aboriginal governments and organizations on policies that have the potential to impact treaty rights or asserted Aboriginal rights. This is not specific to food policies.

Policy area: Health-in-all-policies

Food-EPI vision statement: Processes are in place to ensure policy coherence and alignment, and that population health impacts are explicitly considered in the development of government policies

HIAP1 Assessing the health impacts of food policies

Food-EPI good practice statement

There are processes in place to ensure that population nutrition, health outcomes and reducing health inequalities or health impacts in vulnerable populations are considered and prioritised in the development of all government policies relating to food

Definitions and scope	<ul style="list-style-type: none">- Includes policies, procedures, guidelines, tools and other resources that guide the consideration and assessment of nutrition, health outcomes and reducing health inequalities or health impacts in vulnerable populations prior to, during and following implementation of food-related policies- Includes the establishment of cross-department governance and coordination structures while developing food-related policies
International examples	<ul style="list-style-type: none">- Slovenia: Undertook a HIA in relation to agricultural policy at a national level. The HIA followed a six-stage process: policy analysis; rapid appraisal workshops with stakeholders from a range of backgrounds; review of research evidence relevant to the agricultural policy; analysis of Slovenian data for key health-related indicators; a report on the findings to a key cross-government group; and evaluation⁸³.

Context

Policy details

The **Yukon Health and Social Services Strategic Plan 2014-2019** states that the territorial government will ensure that “appropriate consideration is given to health concerns when relevant policies, programs or projects are initiated.” There is not specific reference to nutrition, and the implementation of this is unclear⁶⁴.

The **Yukon Agriculture Policy** vision includes a reference to the production of healthy locally grown food⁶⁵. Although this is more in response to growing of healthy food through best management practices, and less on nutritional impact.

Comments/ notes

HIAP2 Assessing the health impacts of non-food policies

Food-EPI good practice statement

There are processes (e.g. HIAs) to assess and consider health impacts during the development of other non-food policies

Definitions and scope

- Includes a government-wide HiAP strategy or plan with clear actions for non-health sectors
- Includes policies, guidelines, tools and other resources that guide the consideration and assessment of health impacts prior to, during and following implementation of non-food-related policies (e.g. HIAs or health lens analysis)
- Includes the establishment of cross-department or cross-sector governance and coordination structures to implement a HiAP approach
- Includes workforce training and other capacity building activities in healthy public policy for non-health departments (e.g. agriculture, education, communications, trade)
- Includes monitoring or reporting requirements related to health impacts for non-health departments

International examples

- **Australia:** Established in 2007, the successful implementation of Health in All Policies (HiAP) in South Australia has been supported by a high level mandate from central government, an overarching framework which is supportive of a diverse program of work, a commitment to work collaboratively and in partnership across agencies, and a strong evaluation process. The government has established a dedicated HiAP team within South Australia Health to build workforce capacity and support Health lens Analysis projects⁸⁴. Since 2007, the South Australian HiAP approach has evolved to remain relevant in a changing context. However, the purpose and core principles of the approach remain unchanged. There have been five phases to the work of HiAP in South Australia between 2007 and 2016: 1) Prove concept and practice emerges (2007-2008), 2) Establish and apply methodology (2008-2009), 3) Consolidate and grow (2009-2013), 4) Adapt and review (2014) and 5) Strengthen and systematise (2015-2016).
- **Finland:** Finland has worked towards a Health in All Policies (HiAP) approach for over the past four decades⁸⁵. In the early 1970s, improving public health became a political priority, and the need to influence key determinants of health through sectors beyond the health sector became evident. The work began with policy on nutrition, smoking and accident prevention. Finland adopted HiAP as the health theme for its EU Presidency in 2006.

Context

Policy details

The **Yukon Health and Social Services Strategic Plan 2014-2019** states that the territorial government will ensure that “appropriate consideration is given to health concerns when relevant policies, programs or projects are initiated.” There is not specific reference to nutrition, and the implementation of this is unclear⁶⁴.
